Division of Biological Science

Subject: Biological Science

Biological Science 205 Section: 1

Biological Sciences Seminars (190157)

Brendan Manning

2020 Fall (5 Credits) **Schedule:** MW 0230 PM - 0359 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Faculty present seminars on their current research in the biological sciences and direct a student discussion of the logic and experimental design of this research. Topics include chemical and viral carcinogenesis, DNA damage and repair, immunology, molecular biology, metabolism, cardiovascular disease, parasitology, and how these areas apply to public health issues.

Course Note: Required for first-year students in the DBS/BPH program.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 2: Required Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Science 205 Section: 1

Biological Sciences Seminars (190157)

Tiffany Horng

2017 Fall (5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 15

Faculty present seminars on their current research in the biological sciences and direct a student discussion of the logic and experimental design of this research. Topics include chemical and viral carcinogenesis, DNA damage and repair, immunology, molecular biology, metabolism, cardiovascular disease, parasitology, and how these areas apply to public health issues.

Course Note: Required for first-year students in the DBS/BPH program. Cross listed as BPH301 with the Graduate School of Arts and Sciences

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Science 300 Section: 1

Independent Study (190160)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

An opportunity for independent study is offered for interested and qualified students or small groups of students. Arrangements must be made with individual faculty members and are limited by the amount of faculty time available. These programs are open to all students who wish to go beyond the content of the regular courses. Offers hands-on experimental methods of research in the biological sciences. Students perform individualized and original laboratory work. Includes participation in seminars, journal clubs, and assigned readings.

Additional Course Attributes:

Attribute	Value(s)

Biological Science 300 Section: 1

Independent Study (190160)

Instructor TBD

2015 Fall (0.25 Credits) **Schedule:** TBD

Biostatistics

Subject: Biostatistics

Biostatistics 111 Section: 1

Introduction to Programming in SAS (190005)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 44

Introduction to Programming in SAS
Provides an overview in the use of SAS to prepare data for statistical analysis. The focus is on database management and programming problems. Basic issues in each of these areas are discussed in the context of introducing the specific skills required to use SAS effectively.
Course is mutually exclusive with BIO 113. You may not take both this course and BIO113.

Introduction to Data Management and Programming in SAS (190007)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 48

Introduction to Data Management and Programming in SAS
Lectures, laboratories. Two 2-hour sessions each week. Two 1-hour lab each week.Provides intensive instruction in the use of SAS to prepare data for statistical analysis. The focus is on database management and programming problems. Basic issues in each of these areas are discussed in the context of teaching the specific skills required to use SAS effectively.

Course Prerequisites: BIO200 or BIO201 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209
Course is mutually exclusive with BIO 111. You may not take both this course and BIO113.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 113 Section: 1

Biostatistics 200 Section: 1

Principles of Biostatistics (190009)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 175

Lectures and laboratory exercises acquaint the student with the basic concepts of biostatistics and their applications and interpretation. The computer is used throughout the course. Topics include descriptive statistics, graphics, diagnostic tests, probability distributions, inference, tests of significance, association, linear and logistic regression, life tables, and survival analysis.

Course Note: Lab or section times to be announced at first meeting.

BIO200 is restricted to the following programs:
This basic course is targeted towards students in the GCD, HPM, GHP, and IID Departments, SBS Master's students, and MPH students in the CMP, GH, HSB, LPH and OEH concentrations (except for OEMR). Other students (TAP, FAS, MIT, non-degree or Special Students, etc.) are also welcome to take this course.

Other programs please see BIO201
Course is mutually exclusive with BIO 201, 202, 203, 206, 207, 208, and 209. You may not take both this course and any one of those courses.

Biostatistics 201 Section: 1

Introduction to Statistical Methods (190012)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 165

Covers basic statistical techniques that are important for analyzing data arising from epidemiology, environmental health and biomedical and other public health-related research. Major topics include descriptive statistics, elements of probability, introduction to estimation and hypothesis testing, nonparametric methods, techniques for categorical data, regression analysis, analysis of variance, and elements of study design. Applications are stressed. Designed as an alternate to BIO200, for students desiring more emphasis on theoretical developments. Background in algebra and calculus strongly recommended.

Course Note: Lab or section times to be announced at first meeting.

BIO201 is restricted to the following programs:
All Degrees in the following departments: Epidemiology (EPI), Division of Biological Sciences (DBS), Environmental Health (EH), Nutrition (NUT)
DPH: Social and Behavioral Sciences (SBS)
SD: Social and Behavioral Sciences (SBS)
PHD: Biological Science in Public Health (BPH)
MPH: Quantitative Methods (QM)
Other programs please see BIO200
Course is mutually exclusive with BIO200, 202, 203, 206, 207, 208, and 209. You may not take both this course and any of those courses.

Biostatistics 202 Section: 1

Principles of Biostatistics I (190014)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

This course is the first part of introductory biostatistics and acquaints the student with the basic concepts and methods of biostatistics, their applications, and their interpretation. The material covered includes data presentation, numerical summary measures, rates and standardization, and life tables. Probability is introduced to quantify uncertainty, especially as it pertains to diagnostic and screening methods. Also covered are sampling distributions so that students may be introduced to confidence intervals and hypothesis testing. The computer is used throughout the course, and the student will gain familiarity with the software package STATA.

Course Note: Requires a basic knowledge of mathematics and familiarity with use of personal computers.
Course is mutually exclusive with BIO200, 201, 206, 207, 208, and 209 or ID201. You may not take both this course and any of those courses.
Course co-requisite: You must register for both this course and BIO203.

Additional Course Attributes:

Biostatistics 203 Section: 1

Principles of Biostatistics II (190016)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

BIO 202 + 203 must be taken consecutively and students must register for both.

This course is the second part of introductory biostatistics; it continues to explore inference in greater depth. Lectures and laboratory exercises will emphasize applied data analysis, building upon the fundamentals emphasized in BIO 202. Topics covered include the comparison of two means, analysis of variance, non-parametric methods, inference on proportions, contingency tables, multiple 2 X 2 tables, correlation, simple regression, multiple regression and logistic regression, analysis of survival data, and sampling theory. The computer is used throughout the course, and the student will gain more familiarity with STATA.
Course Corequisite(s): BIO-202
Course is mutually exclusive with BIO200, 201, 206, 207, 208, and 209. You may not take both this course and any of those courses.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 206 Section: 1

Introduction to Statistics for Medical Research (190021)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 180

This course is reserved for participants in the Program in Clinical Effectiveness only.

Introduces basic biostatistical techniques with an emphasis on applications to clinical research. Topics include probability and statistics, hypothesis testing, confidence intervals, non-parametrics, and power calculations.
Course Restricted: PCE Participants only (or instructor permission)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 206 Section: 1

Introduction to Statistics for Medical Research (190021)

Instructor TBD

2014 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 175

This course is reserved for participants in the Program in Clinical Effectiveness only.

Introduces basic biostatistical techniques with an emphasis on applications to clinical research. Topics include probability and statistics, hypothesis testing, confidence intervals, non-parametrics, and power calculations.
Course Restricted: PCE Participants only (or instructor permission)

Biostatistics 207 Section: 1

Stats for Med. Research II (190022)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 78

This course is reserved for participants in the Program in Clinical Effectiveness only.

Presents additional biostatistical techniques that commonly appear in the analysis of clinical databases and trials. Topics include contingency table analyses, log-rank tests, paired and matched analyses, analysis of variance and multiple comparisons procedures.
Course Prerequisite(s): BIO206
Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 207 Section: 1

Stats for Med. Research II (190022)

Instructor TBD

2014 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 78

This course is reserved for participants in the Program in Clinical Effectiveness only.

Presents additional biostatistical techniques that commonly appear in the analysis of clinical databases and trials. Topics include contingency table analyses, log-rank tests, paired and matched analyses, analysis of variance and multiple comparisons procedures.
Course Prerequisite(s): BIO206

Stats for Med Research Advncd (190023)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 175

This course is reserved for participants in the Program in Clinical Effectiveness only.

Presents additional biostatistical techniques that commonly appear in the analysis of clinical databases and trials. This course will move at a faster pace than the alternative BIO 207 while covering all of the same topics (contingency tables, log-rank tests, paired and matched analyses, analysis of variance and multiple comparisons procedures). In addition, linear and logistic regression will be introduced.
Course Prerequisite(s): BIO206
Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 209 Section: 1

Statistics for Medical Research, Translational (190024)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 35

Presents additional biostatistical techniques that are most relevant to researchers involved with designed experiments. Topics include contingency tables, paired analyses, simple analysis of variance, multiple comparisons procedures, two-way analysis of variance, and simple repeated measures analysis of variance.
Course Prerequisite(s): BIO206
Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 210 Section: 1

The Analysis of Rates and Proportions (190025)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 150

Emphasizes concepts and methods for analysis of data which are categorical, rate-of-occurrence (e.g., incidence rate), and time-to-event (survival duration). Stresses applications in epidemiology, clinical trials, and other public health research. Topics include measures of association, 2x2 tables, stratification, matched pairs, logistic regression, model building, analysis of rates, and survival data analysis using proportional hazards models.

Course Note: Lab or section times to be announced at first meeting.

Course Prerequisites: BIO200 or BIO201 or ID200 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 211 Section: 1

Regression and Analysis of Variance in Experimental Research (190026)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 77

Covers analysis of variance and regression, including details of data-analytic techniques and implications for study design. Also included are probability models and computing. Students learn to formulate a scientific question in terms of a statistical model, leading to objective and quantitative answers.

Course Note: Lab or section times to be announced at first meeting.

Course Prerequisites: BIO200 or BIO201 or ID200 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209

Additional Course Attributes:

Biostatistics 211 Section: 1

Regression and Analysis of Variance in Experimental Research (190026)

Instructor TBD

2012 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 68

Covers analysis of variance and regression, including details of data-analytic techniques and implications for study design. Also included are probability models and computing. Students learn to formulate a scientific question in terms of a statistical model, leading to objective and quantitative answers.

Course Note: Lab or section times to be announced at first meeting.
Course Prerequisite(s): BIO200 or BIO201 or BIO202&203 or BIO206&BIO207/8/9

Survey Research Methods in Community Health (190027)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

Covers research design, sample selection, questionnaire construction, interviewing techniques, the reduction and interpretation of data, and related facets of population survey investigations. Focuses primarily on the application of survey methods to problems of health program planning and evaluation. Treatment of methodology is sufficiently broad to be suitable for students who are concerned with epidemiological, nutritional, or other types of survey research.

Additional Course Attributes:

Biostatistics 213 Section: 1

Applied Regression for Clinical Research (190028)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 145

This course will introduce students involved with clinical research to the practical application of multiple regression analysis. Linear regression, logistic regression and proportional hazards survival models will be covered, as well as general concepts in model selection, goodness-of-fit, and testing procedures. Each lecture will be accompanied by a data analysis using SAS and a classroom discussion of the results. The course will introduce, but will not attempt to develop the underlying likelihood theory. Background in SAS programming ability required.

Course Note:Lab or section times to be announced at first meeting.
Section 2 of this course is online and only available to Summer Only EPI-SM1 students and students participated in the Integrated Course in Clinical Epidemiology and Biostatistics.

Course Prerequisites: BIO200 or BIO201 or ID200 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209
"

Principles of Clinical Trials (190029)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 100

Designed for individuals interested in the scientific, policy, and management aspects of clinical trials. Topics include types of clinical research, study design, treatment allocation, randomization and stratification, quality control, sample size requirements, patient consent, and interpretation of results. Students design a clinical investigation in their own field of interest, write a proposal for it, and critique recently published medical literature.
Course Prerequisites: BIO200 or BIO201 or ID200 OR ID201 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209

Not Just Statistics (190035)

Instructor TBD

2016 Spring (0 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 12

Not Just Statistics focuses on the use of statistics to strengthen social justice efforts. This course targets research-supported arguments to help overcome the health inequities currently experienced in the US. This course will teach students how to inject quantitative empirical arguments into their research topics' discourse and strengthen their arguements. Students will also learn to recognize falacious arguments as well as use data to make cogent cases with the goal of preparing students to bebetter social justice advocates. Course enrollment is limited to students who have demonstrated personal and/or professional interest in injustice/health related disparities. Students will gain experience ranging from data collection and interpretation to faithfully reporting and disseminating their research findings. By the end of this course students will have refined their statistical skills and acquired powerful quantitative methods and

developed manuscripts suitable for publication.

Course enrollment is by permission of the instructor and will be limited to students who ahve a demonstrated personal and/or professional interest in issues of injustice/health related disparities.

Biostatistics 222 Section: 1

Basics of Statistical Inference (190039)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 71

This course will provide a basic, yet thorough introduction to the probability theory and mathematical statistics that underlie many of the commonly used techniques in public health research. Topics to be covered include probability distributions (normal, binomial, Poisson), means, variances and expected values, finite sampling distributions, parameter estimation (method of moments, maximum likelihood), confidence intervals, hypothesis testing (likelihood ratio, Wald and score tests). All theoretical material will be motivated with problems from epidemiology, biostatistics, environmental health and other public health areas. This course is aimed towards second year doctoral students in fields other than Biostatistics. Background in algebra and calculus required.

Course Note: Lab or section times to be announced at first meeting.
Course Prerequisites: BIO210 or BIO211 or BIO213

Additional Course Attributes:

Applied Survival Analysis (190040)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 64

Topics will include types of censoring, hazard, survivor, and cumulative hazard functions, Kaplan-Meier and actuarial estimation of the survival distribution, comparison of survival using log rank and other tests, regression models including the Cox proportional hazards model and the accelerated failure time model, adjustment for time-varying covariates, and the use of parametric distributions (exponential, Weibull) in survival analysis. Methods for recurrent survival outcomes and competing risks will also be discussed, as well as design of studies with survival outcomes. Class material will include presentation of statistical methods for estimation and testing along with current software (SAS, Stata) for implementing analyses of survival data. Applications to real data will be emphasized.
Course Prerequisite(s): BIO210 or BIO213 or BIO230

Additional Course Attributes:

Applied Survival Analysis (190040)

Instructor TBD

2013 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 61

This course will cover topics in both discrete data analysis (25% of class) and applied survival analysis (75% of class). The course will begin with a review of sampling plans and contingency table for discrete data. Further topics in discrete data analysis will include logistic regression, exact inference, and conditional logistic regression. This short survey of discrete data topics will provide a natural transition to analysis of survival data. Survival topics include: hazard, survivor, and cumulative hazard functions,

Kaplan-Meier and actuarial estimation of the survival distribution, comparison of survival using log rank and other tests, regression models including the Cox proportional hazards model and accelerated failure time model, adjustment for time-varying covariates, and use of parametric distributions (exponential, Weibull) in survival analysis. Class material will include presentation of statistical methods for estimation and testing, along with current software (SAS, Stata, Splus) for implementing analyses of discrete data and survival data. Applications to real data will be emphasized.
Course Prerequisite(s): BIO210 or BIO213 or BIO230

Biostatistics 224 Section: 1

Survival Methods in Clin Rsrch (190041)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 65

In order to be considered for this course, please submit a one paragraph statement to the instructor, stating your reason(s) for wanting to attend this course.

This course will cover the common approaches to the display and analysis of survival data, including Kaplan-Meier curves, log rank tests, and Cox proportional hazards regression. Computing, using SAS, will be an integral component of the course.

Course Prerequisite(s): BIO210, 211, 213, 215 or EPI236
Course Restricted: Program in Clinical Effectivness participants or MPH-QM students only (or instructor permission)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 226 Section: 1

Applied Longitudinal Analysis (190043)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 175

This course covers modern methods for the analysis of repeated measures, correlated outcomes and longitudinal data, including the unbalanced and incomplete data sets characteristic of biomedical research. Topics include an introduction to the analysis of correlated data, analysis of response profiles, fitting parametric curves, covariance pattern models, random effects and growth curve models, and generalized linear models for longitudinal data, including generalized estimating equations (GEE) and generalized linear mixed effects models (GLMMs).

Course Activities: Homework assignments will focus on data analysis in SAS using PROC GLM, PROC MIXED, PROC GENMOD, and PROC NLMIXED.

Course Note: Lab or section times will be announced at first meeting.
Course Prerequisite(s): BIO210 or BIO211 or BIO213 or BIO232

Additional Course Attributes:

Fundamental Concepts in Gene Mapping (190044)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Course Prerequisites: BIO210 or BIO211 (both classes may be taken concurrently)

This course introduces students to the diverse statistical methods used throughout the process of statistical genetics, from familial aggregation and segregation studies to linkage scans candidate-gene association studies. Topics covered include basic principles from population genetics, multipoint and model-free linkage analysis, family-based and population-based association testing, and Genome Wide Association analysis. Instructors use ongoing research into the genetics of respiratory disease, psychiatric disorders and cancer to illustrate basic principles. Weekly homeworks supplement reading, course lectures, discussion and section. Relevant concepts in genetics and molecular genetics will be reviewed in lectures and labs. The emphasis of the course is fundamental principles and concepts.

Course Note: There will be a weekly section; the time will be scheduled at first meeting.

Probability Theory and Applications I (190047)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 21

Course Prerequisites:
You must be a Biostatistics student or have taken BIO222 to register for this course. If you have taken BIO222 and are not a Biostatistics student, please ask the instructor for an instructor override.

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Note: lab or section times to be announced at first meeting; cross-listed: HSPH student must register for HSPH course.

Statistical Inference I (190048)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 24

A fundamental course in statistical inference. Discusses general principles of data reduction: exponential families, sufficiency, ancillarity and completeness. Describes general methods of point and interval parameter estimation and the small and large sample properties of estimators: method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, asymptotic relative efficiency of estimators. Describes general methods of hypothesis testing and optimality properties of tests: Neyman-Pearson theory, likelihood ratio tests, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency of tests.

Course Note: Lab or section time to be announced at first meeting; cross-listed: HSPH student must register for HSPH course.
Course Prerequisite(s): BIO230 (concurrent enrollment allowed)

Research Synth & Meta Analysis (190051)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Introduction to systematic reviews and meta-analysis methods as used in public health and clinical medicine. Students learn how to use a variety of formal and informal methods for identifying, evaluation and synthesizing information from randomized controlled trials and observational studies, assessing the strength of the evidence, and translating the results into policy and practice guidelines. Concepts are introduced and illustrated through case studies of public health and medical issues. Working in groups of 3 to 5 individuals, students will be expected to carry out a written research synthesis of a public health or

clinical topic of their choosing. Intermediate results will be presented and discussed in class.

Course Prerequisite Statement:

Requires strong quantitative skills as well as knowledge of the design, analysis, evaluation, and interpretation of randomized clinical trials and observational/epidemiological studies. MPH-level courses in biostatistics and epidemiology are a pre-requisite or a co-requisite. Priority for enrollment will be given to students in the Program for Clinical Effectiveness (PCE). Non-degree students must provide evidence of the necessary knowledge and ability (e.g., grades in quantitative courses taken, test scores).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 234 Section: 1

Introduction to Data Structures and Algorithms (190051)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course has limited enrollment. Prerequisites and faculty approval are required.

Concepts are introduced and illustrated through case studies of public health or clinical topic of their choosing. Intermediate results will be presented and discussed in class.

Requires strong quantitative skills as well as knowledge of the design, analysis, evaluation, and interpretation of randomized clinical trials and observational/epidemiological studies. MPH-level courses in biostatistics and epidemiology are a pre-requisite or a co-requisite. Priority for enrollment will be given to students in the Program for Clinical Effectiveness (PCE). Non-degree students must provide evidence of the ncessary knowledge and ability (e.g. grades in quantitative courses taken, test scores).

This course is equivalent to EPI233 and was formerly ID233; credit will not be given for both courses.

Course prerequisite(s): (BIO200 or ID200 or ID201 or BIO201 or ID207 or BIO202&203 or BIO206&207/208) and (EPI201 or EPI208 or EPI500), or instructor permission.

In order to count BIO200, 201, 202, 206, ID200, 201, 207, or EPI201 towards your prerequisite, you must have a passing grade. The other courses (BIO200, BIO203, BIO207/208, EPI208, EPI500) shold be taken concurrently with BIO234 to count towards the prerequisite.

Requirements: **HSPH: BIO234**

Biostatistics 235 Section: 1

Advanced Regression and Statistical Learning (190052)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimensional reduction, and classification methods. Background in matrix algebra and linear regression required.

Prerequisite: BIO 231 and BIO 233, or permission of instructor required.

Analysis of Multivariate and Longitudinal Data (190060)

Instructor TBD

2014 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Presents classical and modern approaches to the analysis of multivariate observations, repeated measures, and longitudinal data. Topics include the multivariate normal distribution, Hotelling's T2, MANOVA, the multivariate linear model, random effects and growth curve models, generalized estimating equations, statistical analysis of multivariate categorical outcomes, and estimation with missing data. Discusses computational issues for both traditional and new methodologies.

Course Note: Cross-listed, HSPH student must register for HSPH course.

Course Prerequisite:BIO231 and BIO235, or permission of the instructor are required.

Biostatistics 257 Section: 1

Adv Statistical Genetics (190067)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

BIO257 is a seminar style course with readings selected from the literature in areas of expertise of the participating faculty. Content may vary from year to year. The specific objectives are (1) To train students to critically read foundational papers and current journal articles in Statistical Genetics, (2) To train students to present sophisticated ideas to an audience of peers, and (3) To prepare students to engage in doctoral level research in the area. After the course, students are expected to have an in-depth and broad understanding on important topics of statistical genetics research.
Course Prerequisite(s): BIO227 and (BIO231 or EPI511). BIO231 may be taken concurrently.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 260 Section: 1

Introduction to Data Science (190068)

Instructor TBD

2016 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

This class focuses on methods for learning from data, in order to gain useful predictions and insights. Separating signal from noise presents many computational and inferential challenges, which we approach from a perspective at the interface of computer science and statistics. Through real-world examples of wide interest, we introduce methods for five key facets of an investigation:
1) data munging/scraping/sampling/cleaning in order to construct an informative, manageable data set;
2) software engineering skills for accessing data as well as organizing data analyses and making these analyses sharable and reproducible and
3) exploratory data analysis to generate hypotheses and intuition about the data;
4) inference and prediction based on statistical tools such as modeling,regression, and classification;
5) communication of results through visualization, stories, and interpretable summaries.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 276 Section: 1

Design and Monitoring of Adaptive Clinical Trials (190083)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

This course is designed for students who are interested in understanding the motivation, statistical methods and operational challenges associated with the design and implementation of adaptive clinical trials. Adaptive designs permit data dependent changes to an on-going clinical trial that can improve the probability of success without undermining the statistical validity of the final analysis. While the emphasis will be on statistical methodology we will also include regulatory and data monitoring considerations, case studies, important publications, and hands-on experience with the East software as part of the classroom discussion or homework exercises. By the end of the course the students will gain an understanding of the advantages and limitations of adaptive designs, be able to design such trials themselves, be proficient with the East software, and be exposed to some actual case studies. The course will be especially valuable to Ph.D. students who are considering a career in the biopharmaceutical industry.

Course Prerequisite(s): BIO222 or BIO230 or signature of instructor required

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 287 Section: 1

Public Health Surveillance (190092)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 48

Surveillance is an important component of public health. Its function is to detect and monitor disease incidence and it has three components: to collect data, to analyze it, and to report the results. This course considers all three aspects with particular emphasis on the analysis of surveillance data. We shall consider both the more traditional surveillance systems, where data collection and reporting are done at a relatively leisurely pace, and systems that provide for immediate feedback and thus are designed to detect biological terrorism and other situations where rapid response is desirable. We shall study both passive and active surveillance systems. Statistical techniques covered include time series, clustering methods, and other geo-temporal techniques.
Course Prerequisites: ID538 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI505)]

Additional Course Attributes:

Statistical Methods for Incomplete Data (190098)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 10

This course concerns modern statistical methods for handling incomplete data. We will review basic taxonomy of missing data. The possible failure of inference based on ad-hoc methods for handling missing data will be reviewed, and modern methods to appropriately account for incomplete information will be introduced. We will study three prominent frameworks for handling missing data: likelihood based methods, Bayesian inference and semiparametric techniques.

Course Prerequisite(s): BIO230 and BIO233

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 312 Section: 1

Consultation (190103)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department on current statistical consultation activities.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 312 Section: 1

Consultation (190103)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department on current statistical consultation activities.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 312 Section: 1

Consultation (190103)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department on current statistical consultation activities.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 312 Section: 1

Consultation (190103)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department on current statistical consultation activities.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 1

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 1

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2013 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 1

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 1

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 3

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 3

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 3

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 3

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 316 Section: 3

Quantitative Genomics Lab Rotation (190107)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 1

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 1

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2013 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 1

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2015 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 10

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 10

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2015 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 11

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 11

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2015 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 12

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2016 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 12

Master's Thesis and Collaborative Research Practicum (190108)

Instructor TBD

2015 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 325 Section: 13

Master's Thesis and Collaborative Research Practicum (190108)

CBQG Collaborative Research Thesis (190109)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 350 Section: 1

Research (190110)

Instructor TBD

2014 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

For doctoral candidates who have passed their written qualifying exam and who are undertaking advanced work along the lines of fundamental or applied research in the department.

Additional Course Attributes:

Linear and Longitudinal Regression (190112)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 51

This course has limited enrollment. Course prerequisites are required.

This course is intended for students who are already very comfortable with fundamental techniques in statistics. The course will cover methods for building and interpreting linear regression models, including statistical assumptions and diagnostics, estimation and testing, and model building techniques. These models will be extended to handle data arising from longitudinal studies employing repeated measurement of subjects over time. Lectures will be accompanied by computing exercises using the SAS statistical package.

Course Note: Lab or section will be announced at first meeting
Course Prerequisites: BIO201 or ID200 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 501 Section: 1

Linear and Longitudinal Regression (190112)

Garrett Fitzmaurice

2016 Summer (2.5 Credits) **Schedule:** MTWRF 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 51

Introduction to Programming and Statistical Modeling in R (190114)

Instructor TBD

2014 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 24

This course is an introduction to R, a powerful and flexible statistical language and environment that also provides more flexible graphics capabilities than other popular statistical packages. The course will introduce students to the basics of using R for statistical programming, computation, graphics, and modeling. We will start with a basic introduction to the R language, reading and writing data, and graphics. We then discuss writing functions in R and tips on programming in R.Finally, the latter part of the course will focus on using R to fit some important statistical models, including basic linear regression, generalized linear models and survival analysis. We can provide an introduction to analysis of genomics data in Bioconductor should there be interest among students.

Our goal is to get students up and running with R such that they can use R in their research and are in a good position to expand their knowledge of R on their own. Course notes are written such that they provide students with a useful reference manual on R. Basic knowledge of statistics at the level of a basic understanding of linear regression is required.

Introduction to Quantitative Methods for Monitoring and Evaluation (190118)

Instructor TBD

2014 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Monitoring and evaluation is concerned with assessing the quality of a program as measured against action plans, and evaluating its overall impact. This course addresses the quantitative or statistical aspects

of monitoring and evaluation: what to measure, how to measure, how to analyze and how to make inference for the next steps of program implementation. The course covers quantitative components of M&E, both current and innovative methods, and complements GHP 251 which describes the conceptual framework for M&E.
Course Prerequisites: BIO200 or BIO201 or ID200 or ID201 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209

Genomic Data Manipulation (190119)

Instructor TBD

2013 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 24

Introduction to genomic data, computational methods for interpreting these data, and a survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.
This course is targeted at students in experimental biology programs with an interest in understanding how available genomic techniques and resources can be applied in their research.

Lab or section time will be arranged at first meeting.

Biostatistics 515 Section: 1

Measurement Error and Misclassification (190126)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 33

This course will cover theory for valid estimation and inference in regression analysis when covariates are mis-classified or measured with error. Methods for generalized linear models and for survival analysis will be addressed. Topics include likelihood-based methods, regression calibration, SIMEX, instrumental variables and optimal study design.

Course Prerequisites: BIO231 and BIO223 required
Course is mutually exclusive with EPI515. You may not take both this course and EPI515.

Additional Course Attributes:

Biostatistics 516 Section: 1

Inferential Methods in Infectious Disease (190127)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course will focus on statistical and inferential methods for analyzing infectious disease data. These methods are a complement to more traditional deterministic modeling techniques. Topics discussed include time series methods, Markov chain Monte Carlo (MCMC) methods for the estimation of severity measures, statistical approaches to the estimation of the reproductive number, estimation of important epidemiological intervals, and the estimation of vaccine efficacy. We will introduce the statistical/analytical tools needed for each problem and then work through several real data examples. Classes will consist of lectures and lab time to learn how to implement the methods discussed using R. This course will introduce students to the latest methods in use, as well as expose areas where further research is warranted.

Course Prerequisites: (BIO222 and EPI260) or EPI501

Using Next Gen Seq Analysis PH (190128)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Using a mixed lecture, practical and paper discussion format, this sequence -centric course introduces biomedical scientists and health practitioners to the interpretation and manipulation of Next Generation sequence data. The course provides the basic vocabulary of of how to interpret and manipulate gene expression, microbiome surveys, pathogen strain diversity and human genome variation using ChIpSeq, RNASeq, metagenomics, pathogen and whole exome sequencing data. The course provides insight into the interpretation of nextgen data, and exploration of genomic information, including the use and interpretation of functional network information in order to inform translational research and experimental design. Study discussions cover a number of topics including the encode project and personal genomics.

Mathematical Modeling of Cancer (190130)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

The course will introduce the seminal mathematical models of cancer and will discuss both deterministic and probabilistic approaches. The course is focused on methodology; some limited theory will be covered. Computational techniques are now a standard research tool in mathematical modeling and as a result, there will be extensive discussion of computation. Students are expected to be familiar with a programming language such as Fortran, Matlab, C, C++, or equivalent.

Course Note: Course held in Building 2, Room 426
Course Prerequisites: BIO230

Additional Course Attributes:

Biostatistics 521 Section: 1

Introduction to Social and Biological Networks (190132)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Many natural and social systems consist of a large number of interacting components, and the structure of these systems can be captured as graphs or networks. Network analysis can be used to study how pathogens, behaviors and information spread in social and contact networks, having important implications for understanding epidemics and planning effective interventions. In a biological context, at a molecular level, network analysis can be applied to study gene regulation networks, signal transduction networks, protein interaction networks, and metabolic networks. This introductory course covers network measures (e.g., clustering), properties (e.g., community structure), network types (e.g., bipartite), network models (e.g., Erdos-Renyi), and basic processes on networks (e.g., epidemic spreading). While the covered material essentially applies to all networks, we will focus on social and biological networks in more detail. To be able to analyze and model networks, we will also cover the basics of the Python programming language and its NetworkX module. The course contains a number of hands-on computing exercises, and it is recommended that you bring your own laptops to class. A few loaner laptops will likely be available. The primary course textbook, as well as the software used, is available for free download.

Biostatistics 521 Section: 1

Introduction to Social and Biological Networks (190132)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 40

Many systems of scientific and societal interest consist of a large number of interacting components. The structure of these systems can be represented as networks where network nodes represent the

components and network edges the interactions between the components. Network analysis can be used to study how pathogens, behaviors and information spread in social networks, having important implications for our understanding of epidemics and the planning of effective interventions. In a biological context, at a molecular level, network analysis can be applied to gene regulation networks, signal transduction networks, protein interaction networks, and more. This introductory course covers some basic network measures, models, and processes that unfold on networks. The covered material applies to a wide range of networks, but we will focus on social and biological networks. To analyze and model networks, we will learn the basics of the Python programming language and its NetworkX module.

The course contains a number of hands-on computer lab sessions. There are five homework assignments and four reading assignments that will be discussed in class. In addition, each student will complete a final project that applies network analysis techniques to study a public health problem.

Course Prerequisites: BIO200 or BIO201 or ID200 or ID207 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209

Biostatistics 522 Section: 1

Stochastic Processes with Applications to Biology and Medicine (190133)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

An introduction to the basic theory of stochastic processes and to some biological applications. The course will be accessible to students in mathematics, statistics, and computer science but also in biology or medicine (e.g. cell biologists, molecular biologists).
From a theoretical point of view we will consider, for simplicity, only discrete-state stochastic processes, known as Markov Chains. The transition probabilities, the Chapman-Kolmogorov equations, the Kolmogorov differential equations, the stationary distribution of a Markov Chain, and branching processes will be among the topics covered. Biological applications will be from the areas of genetics, population dynamics, cell biology, epidemiology, cancer genomics and drug resistance.

Statistical and Quantitative Methods for Pharmaceutical Regulatory Science (190134)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 35

The goal of this course is to enable scientists and public health professionals who already have an introductory background in biostatistics and clinical trials to acquire the competencies in quantitative skills and systems thinking required to understand and participate in drug development and regulatory review processes. The course illustrates how statistical and quantitative methods are used to transform information into evidence demonstrating the safety, efficacy and effectiveness of drugs and devices over the course the product?ÇÖs life cycle from a regulatory perspective. Content is delivered using a blended-learning approach involving lectures, web-based media and selected case study examples derived from actual FDA decision-making and regulatory assessments to highlight and describe each phase of the regulatory drug approval process. Case studies will illustrate regulatory science in action and practice and will include content publically available from the FDA?ÇÖs website that can be used in conjunction with FDA science-based guidance?ÇÖs and decision precedents.Course Prerequisites: ID538 or [(BIO200 or ID200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI505)]

2020 Fall (7.5 Credits) **Schedule:** TRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 220

This course will provide an introduction to the methods of biostatistics and epidemiology in the context of public health and clinical research. The focus will be on applications, providing students with the skills necessary to critically interpret issues related to study design and data analysis in the public health literature. The computer is used throughout the course. Lectures are complemented by seminars and weekly lab sessions. Topics include measures of frequency and association, study designs, bias, confounding, screening tests, probability distributions, estimation and statistical inference, sample size estimation, and regression methods.

Requirements: **Course is mutually exclusive with BST202 and BST203.**

Core Principles of Biostatistics and Epidemiology for Public Health Practice - Required LAB (213377)

Kimberlee Gauvreau

Elizabeth Mostofsky

2020 Fall (0 Credits) **Schedule:** F 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 24

This course will provide an introduction to the methods of biostatistics and epidemiology in the context of public health and clinical research. The focus will be on applications, providing students with the skills necessary to critically interpret issues related to study design and data analysis in the public health literature. The computer is used throughout the course. Lectures are complemented by seminars and weekly lab sessions. Topics include measures of frequency and association, study designs, bias, confounding, screening tests, probability distributions, estimation and statistical inference, sample size estimation, and regression methods.

Requirements: **Course is mutually exclusive with BST202 and BST203.**

2017 Spring (1.25 Credits) **Schedule:** T 0530 PM - 0720 PM

Instructor Permissions: None **Enrollment Cap:** 55

QM Master of Public Health students develop a practicum project, many with collaborators from their home institutions, under the supervision of a local mentor or preceptor, and if required a member of the faculty at Harvard Chan. This practicum should include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. During Fall 1 and 2 semesters, students must attend class sessions during which the various components of the practicum and culminating experience will be described and opportunities for practicum projects will be discussed. Prior to the end of Fall 2, students must submit a written proposal for the practicum along with the approval signature of the qualified individual indicating an agreement to act as the local mentor or preceptor for the practicum project. This proposal is reviewed by the Harvard Chan course instructors. During Spring 1, students must give a brief oral presentation to the class describing their practicum activities progress. Students must also submit three written interim progress reports (Review of the Literature, Detailed Study Outline, Field Study or Expert Interview Report) during Spring 1 and one written interim progress report (Data Management/Statistical Analysis Report) during Spring 2 according to the schedule outlined in the course syllabus. As part of their required MPH "culminating experience", during Spring 2 students must submit a structured abstract which will be published in the annual MPH QM Abstract book and give a poster presentation during the scheduled MPH QM Annual Poster Day Sessions They also must attend all Poster Day Sessions when they are not presenting and submit at least six written reviews critiquing the practicum project posters of their fellow students. Finally, all students must submit their practicum project as a final written report which would be considered suitable for publication.

Course Note: Students must attend the scheduled Fall 1, Fall 2, Spring 1 and Spring 2 classes and presentations as noted in the course syllabus.

Practice and Culminating Experience for Quantitative Methods (Summer) (190803)

Marcia Testa

2017 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Summer-Only QM Master of Public Health students develop an off-site practicum at their home institution under the supervision of a local mentor and a member of the faculty at HSPH. This practicum may include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. Following the second (QM) summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or a technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Students must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and among students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Practice and Culminating Experience for Quantitative Methods (Summer) (190803)

Marcia Testa

2017 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Summer-Only QM Master of Public Health students develop an off-site practicum at their home institution under the supervision of a local mentor and a member of the faculty at HSPH. This practicum may include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. Following the second (QM) summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or a technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Students must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and

among students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Requirements: **HSPH: ID 370**

2020 Fall (1.25 Credits) **Schedule:** T 0530 PM - 0720 PM

Instructor Permissions: None **Enrollment Cap:** 55

QM Master of Public Health students develop a practicum project, many with collaborators from their home institutions, under the supervision of a local mentor or preceptor, and if required a member of the faculty at Harvard Chan. This practicum should include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. During Fall 1 and 2 semesters, students must attend class sessions during which the various components of the practicum and culminating experience will be described and opportunities for practicum projects will be discussed. Prior to the end of Fall 2, students must submit a written proposal for the practicum along with the approval signature of the qualified individual indicating an agreement to act as the local mentor or preceptor for the practicum project. This proposal is reviewed by the Harvard Chan course instructors. During Spring 1, students must give a brief oral presentation to the class describing their practicum activities progress. Students must also submit three written interim progress reports (Review of the Literature, Detailed Study Outline, Field Study or Expert Interview Report) during Spring 1 and one written interim progress report (Data Management/Statistical Analysis Report) during Spring 2 according to the schedule outlined in the course syllabus. As part of their required MPH "culminating experience", during Spring 2 students must submit a structured abstract which will be published in the annual MPH QM Abstract book and give a poster presentation during the scheduled MPH QM Annual Poster Day Sessions They also must attend all Poster Day Sessions when they are not presenting and submit at least six written reviews critiquing the practicum project posters of their fellow students. Finally, all students must submit their practicum project as a final written report which would be considered suitable for publication.

Course Note: Students must attend the scheduled Fall 1, Fall 2, Spring 1 and Spring 2 classes and presentations as noted in the course syllabus.

Requirements: **Course restricted to students in the MPH45 qualitative methods (academic year) program HSPH: ID 945A/B**

Practice and Culminating Experience for Quantitative Methods: Extension (211055)

Marcia Testa

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

This course allows students to extend their MPH practicum project as a continuation of ID 945B at a more advanced and intensive level. To register, students must: 1) have completed all assignments required in ID 945B as of the end of Spring 1; 2) submit an ID 945C proposal during the last two weeks of Spring 2 outlining the advanced work to be undertaken; and 3) receive approval from the ID 945C primary instructor that (1) and (2) are satisfactory. Successful completion of Assignment ID 945C Integrated Learning Experience (ILE) - #7 entitled "Additional Practicum Work Deliverable" will be required to receive a passing grade. The ILE #7 work product may include any one of the following (or combination) based upon the practicum project: a) quantitative methods summary report describing the additional data collected or analyses performed; b) professional meeting presentation involving submission and acceptance of an abstract for presentation, recording of the oral presentation or copy of the poster presentation and documentation of meeting attendance; c) documentation of a submitted manuscript of the practicum project; d) description of additional internship or experiential work in conjunction with a public health or other similar agency or health care affiliate or approved partner; and e) description of biostatistical or

epidemiological methods work relating to the practicum project data. or study design Under special circumstances and with the instructor's approval, students may also choose to work on a different topic than the one previously chosen for ID945AB.

Enrollment Requirement Notes:

To qualify for enrollment into ID945C you must have completed all your ID945A and ID945B assignments due by the end of Spring 1. If you enroll for ID945C and you have not completed all of your ID945A and ID945B assignments, you will need to finish them or drop the course by the end of the Spring 2 Add/Drop period.

Health Data Science Capstone Course (207859)

Heather Mattie

Tamar Sofer

2020 Fall (7.5 Credits) **Schedule:** M 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 17

The overall objective of this course is to allow students to integrate and apply various methods introduced in previous coursework in the Masters In Health Data Science program to different real-world data sets across knowledge domains. The course is split into three segments, each involving a different individual or group project and various career development lectures to prepare students for a variety of professional positions. For the first sequence (4 weeks in length), students will attempt to reproduce the findings of a recently published journal article, critique the reproducibility of that article, and present their findings in class. For the second sequence (5 weeks in length), each student will be given access to a data set and will be required to develop a research question, execute data wrangling and appropriate statistical analyses to answer that question, and give a presentation summarizing their findings. Finally, for the third sequence (5 weeks In length), students will be split into small groups (4-5 students) and each group will be given the same data set·and prompt. The groups will compete against one another to find the best solution and present their strategy and results in class at the end of the segment. Students must use Python for all exercises, and will also be required to submit an individual write-up for the first two projects and a group write-up for the group project in the form of Jupyter notebooks.

Requirements: **Prerequisites: BST222 and BST260 and BST261 and BST262 and BST263**

Limited to Health Data Science masters students in the final semester of their program.

The overall objective of this course is to allow students to integrate and apply various methods introduced in previous coursework in the Masters In Health Data Science program to different real-world data sets across knowledge domains. The course is split into three segments, each involving a different individual or group project and various career development lectures to prepare students for a variety of professional positions. For the first sequence (4 weeks in length), students will attempt to reproduce the findings of a recently published journal article, critique the reproducibility of that article, and present their findings in class. For the second sequence (5 weeks in length), each student will be given access to a data set and will be required to develop a research question, execute data wrangling and appropriate statistical analyses to answer that question, and give a presentation summarizing their findings. Finally, for the third sequence (5 weeks In length), students will be split into small groups (4-5 students) and each group will be given the same data set·and prompt. The groups will compete against one another to find the best solution and

present their strategy and results in class at the end of the segment. Students must use Python for all exercises, and will also be required to submit an individual write-up for the first two projects and a group write-up for the group project in the form of Jupyter notebooks.

Class Notes: **Course will be held in the Biostatistics Conference Room (Building 2, Room 426)**

Requirements: **Prerequisites: BST222 and BST260 and BST261 and BST262 and BST263**

Limited to Health Data Science masters students in the final semester of their program.

Additional Course Attributes:

Subject: Biostatistics

Biostatistics 113 Section: 1

Introduction to Data Management and Programming in SAS (190007)

Polyna Khudyakov

2016 Fall (2.5 Credits) **Schedule:** MW 0130 PM - 0320 PM
MW 0330 PM - 0420 PM

Instructor Permissions: None **Enrollment Cap:** 48

Introduction to Data Management and Programming in SAS
Lectures, laboratories. Two 2-hour sessions each week. Two 1-hour lab each week.Provides intensive instruction in the use of SAS to prepare data for statistical analysis. The focus is on database management and programming problems. Basic issues in each of these areas are discussed in the context of teaching the specific skills required to use SAS effectively.

Course Prerequisites: BST200 or BST201 or BST202&203 or BST206&207 or BST206&208 or BIO206&209

Course is mutually exclusive with BST111. You may not take both this course and BST111.

Formerly BIO113

Requirements: **HSPH: BST113**

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 201 Section: 1

Introduction to Statistical Methods (190012)

Paul Catalano

2020 Fall (5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 140

Covers basic statistical techniques that are important for analyzing data arising from epidemiology, environmental health and biomedical and other public health-related research. Major topics include descriptive statistics, elements of probability, introduction to estimation and hypothesis testing, nonparametric methods, techniques for categorical data, regression analysis, analysis of variance, and elements of study design. Applications are stressed. Designed for students desiring more emphasis on theoretical developments. Background in algebra and calculus strongly recommended.

BST201 is restricted to the following programs:
All Degrees in the following departments: Epidemiology (EPI), Division of Biological Sciences (DBS), Environmental Health (EH), Nutrition (NUT)
SM2: Global Health and Population (GHP)
SD and SM1: Social and Behavioral Sciences (SBS)
PHD: Biological Science in Public Health (BPH)
MPH: Quantitative Methods (QM)
Other programs please see ID201

Formerly BIO201

Requirements: **Course is mutually exclusive with BST202, 203, 206, 207, 208, and ID201. You may not take both this course and any of those courses.**

Instructor Permissions: None **Enrollment Cap:** 23

Covers basic statistical techniques that are important for analyzing data arising from epidemiology, environmental health and biomedical and other public health-related research. Major topics include descriptive statistics, elements of probability, introduction to estimation and hypothesis testing, nonparametric methods, techniques for categorical data, regression analysis, analysis of variance, and elements of study design. Applications are stressed. Designed for students desiring more emphasis on theoretical developments. Background in algebra and calculus strongly recommended.

BST201 is restricted to the following programs:
All Degrees in the following departments: Epidemiology (EPI), Division of Biological Sciences (DBS), Environmental Health (EH), Nutrition (NUT)
SM2: Global Health and Population (GHP)

SD and SM1: Social and Behavioral Sciences (SBS)
PHD: Biological Science in Public Health (BPH)
MPH: Quantitative Methods (QM)
Other programs please see ID201

Formerly BIO201

Requirements: **Course is mutually exclusive with BST202, 203, 206, 207, 208, and ID201. You may not take both this course and any of those courses.**

Additional Course Attributes:

Biostatistics 202 Section: 1

Principles of Biostatistics I (190014)

Marcia Testa

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 40

This course is the first part of introductory biostatistics and acquaints the student with the basic concepts and methods of biostatistics, their applications, and their interpretation. The material covered includes data presentation, numerical summary measures, rates and standardization, and life tables. Probability is introduced to quantify uncertainty, especially as it pertains to diagnostic and screening methods. Also covered are sampling distributions so that students may be introduced to confidence intervals and hypothesis testing. The computer is used throughout the course, and the student will gain familiarity with the software package STATA.

BST 202 has a required lab section. Students must enroll in both BST 202 and BST 202LAB in the same term. Failure to enroll in both sections will result in the student being dropped from the single enrolled section

Course Note: Requires a basic knowledge of mathematics and familiarity with use of personal computers.

Course is mutually exclusive with BST 201, 206, 207 and 208, or ID201. You may not take both this course and any of those courses.

Course co-requisite: You must register for both this course and BST203.

Formerly BIO202

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Biostatistics 203 Section: 1

Principles of Biostatistics II (190016)

Kerrie Nelson

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 40

BST 202 + 203 must be taken consecutively and students must register for both.

This course is the second part of introductory biostatistics; it continues to explore inference in greater

depth. Lectures and laboratory exercises will emphasize applied data analysis, building upon the fundamentals emphasized in BST 202. Topics covered include the comparison of two means, analysis of variance, non-parametric methods, inference on proportions, contingency tables, multiple 2 X 2 tables, correlation, simple regression, multiple regression and logistic regression, analysis of survival data, and sampling theory. The computer is used throughout the course, and the student will gain more familiarity with STATA.

BST 203 has a required lab section. Students must enroll in both BST 203 and BST 203LAB in the same term. Failure to enroll in both sections will result in the student being dropped from the single enrolled section

Course Corequisite(s): BST202

2020 Summer (2.5 Credits) **Schedule:** MTWRF 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 175

This course is reserved for participants in the Program in Clinical Effectiveness only.

Introduces basic biostatistical techniques with an emphasis on applications to clinical research. Topics include probability and statistics, hypothesis testing, confidence intervals, non-parametrics, and power calculations.
Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Formerly BIO206

Requirements: **HSPH: BST206**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
HSPH: Program Affiliation	PCE
HSPH: Course Category	Category 1: School-Wide Core Requirement

Biostatistics 206 Section: 1

Introductory Statistics for Medical Research (190021)

E. Orav

2018 Summer (2.5 Credits) **Schedule:** MTWRF 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 175

This course is reserved for participants in the Program in Clinical Effectiveness only.

Introduces basic biostatistical techniques with an emphasis on applications to clinical research. Topics include probability and statistics, hypothesis testing, confidence intervals, non-parametrics, and power calculations.
Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Formerly BIO206

Class Notes: **This course uses SAS software.**

Requirements: **HSPH: BST206**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Program Affiliation	PCE
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 206 Section: 1

Introductory Statistics for Medical Research (190021)

E. Orav

2019 Summer (2.5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 175

This course is reserved for participants in the Program in Clinical Effectiveness only.

Introduces basic biostatistical techniques with an emphasis on applications to clinical research. Topics include probability and statistics, hypothesis testing, confidence intervals, non-parametrics, and power calculations.
Course Restricted: Program in Clinical Effectiveness participants only (or instructor permission)

Formerly BIO206

Requirements: **HSPH: BST206**

Applied Regression Analysis (190025)

Robert Glynn

2021 Spring (5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 75

Topics include model interpretation, model building, and model assessment for linear regression with continuous outcomes, logistic regression with binary outcomes, and proportional hazards regression with survival time outcomes. Specific topics include regression diagnostics, confounding and effect modification, goodness of fit, data transformations, splines and additive models, ordinal, multinomial, and conditional logistic regression, generalized linear models, overdispersion, Poisson regression for rate outcomes, hazard functions, and missing data. The course will provide students with the skills necessary to perform regression analyses and to critically interpret statistical issues related to regression applications in the public health literature.

Requirements: **Prerequisite: ID201 or BST201 or (BST202 and BST203) or (BST206 and (BST207 or 208))**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO
HSPH: Course Category	Category 2: Required Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 210 Section: 1

Applied Regression Analysis (190025)

Erin Lake

2020 Fall (5 Credits)		**Schedule:**	TR 1130 AM - 0100 PM
Instructor Permissions:	None	**Enrollment Cap:**	75

Topics include model interpretation, model building, and model assessment for linear regression with continuous outcomes, logistic regression with binary outcomes, and proportional hazards regression with survival time outcomes. Specific topics include regression diagnostics, confounding and effect modification, goodness of fit, data transformations, splines and additive models, ordinal, multinomial, and conditional logistic regression, generalized linear models, overdispersion, Poisson regression for rate outcomes, hazard functions, and missing data. Applied Regression Analysis (190025)

Sharon Lutz

2018 Fall (5 Credits) **Schedule:** F 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 25

Topics include model interpretation, model building, and model assessment for linear regression with

continuous outcomes, logistic regression with binary outcomes, and proportional hazards regression with survival time outcomes. Specific topics include regression diagnostics, confounding and effect modification, goodness of fit, data transformations, splines and additive models, ordinal, multinomial, and conditional logistic regression, generalized linear models, overdispersion, Poisson regression for rate outcomes, hazard functions, and missing data. The course will provide students with the skills necessary to perform regression analyses and to critically interpret statistical issues related to regression applications in the public health literature.

Prerequisites: ID201 or BST201 or (BST202 and BST203) or (BST206 and (BST207 or BST208)) or permission of instructor

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | BIO SM60, BIO SM2, CBQG SM2

Wave 2 | EPI SM2, EPI SM1, DRPH, EH PHD PHS, EH SM2 & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **HSPH: BST210**

Instructor Permissions: None **Enrollment Cap:** 25

Topics include model interpretation, model building, and model assessment for linear regression with continuous outcomes, logistic regression with binary outcomes, and proportional hazards regression with survival time outcomes. Specific topics include regression diagnostics, confounding and effect modification, goodness of fit, data transformations, splines and additive models, ordinal, multinomial, and conditional logistic regression, generalized linear models, overdispersion, Poisson regression for rate outcomes, hazard functions, and missing data. The course will provide students with the skills necessary to perform regression analyses and to critically interpret statistical issues related to regression applications in the public health literature.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | BIO SM60, BIO SM2, CBQG SM2

Wave 2 | EPI SM2, EPI SM1, DRPH, EH PHD PHS, EH SM2 & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Wave 2 | 08/28/219 12:00AM – 08/29/2019 11:59PM

Wave 3 | 08/30/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisite: ID201 or BST201 or (BST202 and BST203) or (BST206 and (BST207 or 208))**

Survey Research Methods in Community Health (190027)

Thomas Mangione

2021 Spring (2.5 Credits)		**Schedule:**	W 0345 PM - 0515 PM
Instructor Permissions:	None	**Enrollment Cap:**	67

Covers research design, sample selection, questionnaire construction, interviewing techniques, the reduction and interpretation of data, and related facets of population survey investigations. Focuses primarily on the application of survey methods to problems of health program planning and evaluation. Treatment of methodology is sufficiently broad to be suitable for students who are concerned with epidemiological, nutritional, or other types of survey research.

Applied Regression for Clinical Research (190028)

E. Orav

2020 Fall (5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 165

This course will introduce students involved with clinical research to the practical application of multiple regression analysis. Linear regression, logistic regression and proportional hazards survival models will be covered, as well as general concepts in model selection, goodness-of-fit, and testing procedures. Each lecture will be accompanied by a data analysis using SAS and a classroom discussion of the results. The

course will introduce, but will not attempt to develop the underlying likelihood theory. Background in SAS programming ability required.

Course Notes:
1) Lab or section times to be announced at first meeting.

Formerly BIO213

Requirements: **Prerequisite: ID201 or BST201 or (BST202 & BST203) or [BST206 & (BST207 or BST208)]. Concurrent enrollment allowed.**

Linear and Longitudinal Regression (190112)

Garrett Fitzmaurice

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 70

This course is intended for students who are already very comfortable with fundamental techniques in statistics. The course will cover methods for building and interpreting linear regression models, including statistical assumptions and diagnostics, estimation and testing, and model building techniques. These models will be extended to handle data arising from longitudinal studies employing repeated measurement of subjects over time.

When offered in Summer: Restricted to HSPH degree or PCE students.
When offered during the Academic Year: Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students and academic year students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission. All academic year students must request instructor permission prior to adding themselves to the waitlist.

Formerly BIO501

Linear and Longitudinal Regression (190112)

Garrett Fitzmaurice

2017 Summer (2.5 Credits) **Schedule:** MTWRF 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 51

This course is intended for students who are already very comfortable with fundamental techniques in statistics. The course will cover methods for building and interpreting linear regression models, including statistical assumptions and diagnostics, estimation and testing, and model building techniques. These models will be extended to handle data arising from longitudinal studies employing repeated measurement of subjects over time.

Course Prerequisites: EPI522 or BST201 or ID200 or ID201 or ID207 or BST202&203 or BST206&207 or BST206&208

Formerly BIO501

Class Notes: **Lectures will be accompanied by computing exercises using the SAS statistical package.**

Class Notes: **Enrollment Note: Enrollment for this course is limited. All non-degree summer session students must apply to take this course via the limited enrollment survey. All other students (nondegree PCE and degree students) must meet the course guidelines/prerequisites to enroll.**

Requirements: **HSPH: BST 215**

Biostatistics 215 Section: 2

Linear and Longitudinal Regression (190112)

Garrett Fitzmaurice

2021 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 45

This course is intended for students who are already very comfortable with fundamental techniques in statistics. The course will cover methods for building and interpreting linear regression models, including statistical assumptions and diagnostics, estimation and testing, and model building techniques. These models will be extended to handle data arising from longitudinal studies employing repeated measurement of subjects over time.

When offered in Summer: Restricted to HSPH degree or PCE students.
When offered during the Academic Year: Students enrolled in the MPH-EPI program have priority enrollment in this course. If room is available, summer-only students and academic year students will be enrolled into the course from the waitlist. Summer only students may waitlist themselves without receiving instructor permission. All academic year students must request instructor permission prior to adding themselves to the waitlist.

Formerly BIO501

Biostatistics 216 Section: 1

Introduction to Quantitative Methods for Monitoring and Evaluation (190118)

Marcello Pagano

Bethany Hedt

2021 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 67

Monitoring and evaluation is concerned with assessing the quality of a program as measured against action plans, and evaluating its overall impact. This course addresses the quantitative or statistical aspects of monitoring and evaluation: what to measure, how to measure, how to analyze and how to make inference for the next steps of program implementation. The course covers quantitative components of M&E, both current and innovative methods, and complements GHP 251 which describes the conceptual framework for M&E.

Formerly BIO507

Requirements: **Prerequisite: ID201 or BST201 or PHS2000A or (BST202 & BST203) or [BST206 & (BST207 or BST208)].**

Additional Course Attributes:

Statistical and Quantitative Methods for Pharmaceutical Regulatory Science (190134)

Marcia Testa

2021 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 25

The goal of this course is to enable scientists and public health professionals who already have an introductory background in biostatistics and clinical trials to acquire the competencies in quantitative skills and systems thinking required to understand and participate in drug development and regulatory review processes. The course illustrates how statistical and quantitative methods are used to transform information into evidence demonstrating the safety, efficacy and effectiveness of drugs and devices over the course the product's life cycle from a regulatory perspective. Content is delivered using a blended-learning approach involving lectures, web-based media and selected case study examples derived from actual FDA decision-making and regulatory assessments to highlight and describe each phase of the regulatory drug approval process. Case studies will illustrate regulatory science in action and practice and will include content publically available from the FDA's website that can be used in conjunction with FDA science-based guidances and decision precedents.

Formerly BIO523

Basics of Statistical Inference (190039)

David Wypij

2020 Fall (5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 80

This course will provide a basic, yet thorough introduction to the probability theory and mathematical statistics that underlie many of the commonly used techniques in public health research. Topics to be covered include probability distributions (normal, binomial, Poisson), means, variances and expected values, finite sampling distributions, parameter estimation (method of moments, maximum likelihood), confidence intervals, hypothesis testing (likelihood ratio, Wald and score tests). All theoretical material will be motivated with problems from epidemiology, biostatistics, environmental health and other public health areas. This course is aimed towards second year doctoral students in fields other than Biostatistics. Background in algebra and calculus required.

Course Prerequisites: BST210 or BST213 or PHS2000A&B

Formerly BIO222

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | BIO SM 60, BIO SM1, BIO SM2, HDS SM60

Wave 2 | HDS SM60, DrPH, Nutritional EPI, Public Health Nutrition & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Biostatistics 223 Section: 1

Applied Survival Analysis (190040)

Sebastien Haneuse

2021 Spring (5 Credits)		**Schedule:**	TR 0945 AM - 1115 AM
Instructor Permissions:	None	**Enrollment Cap:**	100

BST 223 is a course on survival analysis, or more generally time-to-event analysis, with the primary audience being graduate students pursuing a Masters degree in biostatistics or a PhD in one of the other departments at the Harvard Chan School. Covered in the course will be: an introduction to various types of censoring and truncation that commonly arise; the mathematical representations of time-to-event distributions, such as via the hazard and survivor functions; nonparametric methods such as Kaplan-Meier estimation of the survivor function and log-rank test for hypothesis testing; semi-parametric and parametric regression modeling techniques, such as the Cox model, the accelerated failure time model, the additive hazards model and cure fraction models; survival analysis within the causal inference paradigm; the analysis of competing and semi-competing risks; outcome-dependent sampling schemes, such as nested case-control and case-cohort designs; and, power/sample size calculations for studies with time-to-event endpoints. Throughout, equal emphasis will be given to the theoretical/technical underpinnings of survival analysis and to the use of real world data examples.

Course Prerequisite(s): BST210 or BST213 or BST 232 or BST 260 or PHS2000A

Formerly BIO223

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | BIO SM60 / HDS SM60 / BIO SM2 / CBQG SM2

Wave 2 | EPI SD / PHS PhD (EPI) / GHP SM2 / NUT PhD (Nutritional Epidemiology) /DrPH & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisite: BST210 or BST213 or BST232 or BST260 or PHS2000A.**

Applied Survival Analysis (190040)

Andrea Bellavia

2018 Spring (5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 70

Topics will include types of censoring, hazard, survivor, and cumulative hazard functions, Kaplan-Meier and actuarial estimation of the survival distribution, comparison of survival using log rank and other tests, regression models including the Cox proportional hazards model and the accelerated failure time model, adjustment for time-varying covariates, and the use of parametric distributions (exponential, Weibull) in survival analysis. Methods for recurrent survival outcomes and competing risks will also be discussed, as well as design of studies with survival outcomes. Class material will include presentation of statistical methods for estimation and testing along with current software (SAS, Stata) for implementing analyses of survival data. Applications to real data will be emphasized.

Course Prerequisite(s): BST210 or BST213 or BST 232 or BST 260 or PHS2000A

Biostatistics 225 Section: 1

Introduction to Systematic Reviews and Meta-Analysis Methods (190051)

Michael Stoto

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 26

Introduction to systematic reviews and meta-analysis methods are used in public health and clinical medicine. Students elarn how to use a variety of formal and informal methods for identifying, evaluation, and synthesizing information from randomized controlled trials and observational studies, assessing the strength of the evidence, and translating the results into policy and practice guidelines. Concepts are introduced and illustrated through case studies of public health or clinical topic of their choosing. Intermediate results will be presented and discussed in class.

Requires strong quantitative skills as well as knowledge of the design, analysis, evaluation, and interpretation of randomized clinical trials and observational/epidemiological studies. MPH-level courses in biostatistics and epidemiology are a pre-requisite or a co-requisite. Priority for enrollment will be given to students in the Program for Clinical Effectiveness (PCE). Non-degree students must provide evidence of the ncessary knowledge and ability (e.g. grades in quantitative courses taken, test scores).

Course is mutually exclusive with EPI233. You may not take both this course and EPI233.

Requirements: **[BST 201 or (BST 202 (concurrent) and BST 203) or (BST 206 and BST 207/8 (concurrent))] and [EPI 200 or EPI 201 or EPI 208 (concurrent) or EPI 500] or ID 201 or ID 207. Mutually exclusive with EPI 233.**

Restricted to HSPH Degree or PCE students.

Additional Course Attributes:

Applied Longitudinal Analysis (190043)

Garrett Fitzmaurice

2021 Spring (5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 165

This course covers modern methods for the analysis of repeated measures, correlated outcomes and longitudinal data, including the unbalanced and incomplete data sets characteristic of biomedical research. Topics include an introduction to the analysis of correlated data, analysis of response profiles, fitting parametric curves, covariance pattern models, random effects and growth curve models, and generalized linear models for longitudinal data, including generalized estimating equations (GEE) and generalized linear mixed effects models (GLMMs).

Course Activities: Homework assignments will focus on data analysis in SAS using PROC GLM, PROC MIXED, PROC GENMOD, and PROC GLIMMIX.

Course Note: Lab or section times will be announced at first meeting.

If you are planning to use a current Fall course to satisfy the prerequisites for BST 226, and you have not yet received a grade for that course, you will need to request instructor permission. Please state in your request which course you are currently taking to meet the prerequisite. Permission requests without an accompanying note will not be granted. Please note that an approved petition does not automatically enroll

students into the course; students must return to my.Harvard to finalize enrollment after their petition has been approved.

Please state in your request which course you are currently taking to meet the prerequisite. Permission requests without an accompanying note will not be granted. Please note that an approved petition does not automatically enroll students into the course; students must return to my.Harvard to finalize enrollment after their petition has been approved.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | BIO SM60 / HDS SM60 / BIO SM2 / CBQG SM2

Wave 2 | EPI SD / PHS PhD (EPI) / GHP SM2 / NUT PhD (Nutritional Epidemiology) /DrPH & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Prerequisite: BST210 or BST213 or BST232 or BST260 or PHS2000A**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO
HSPH: Course Material Fee Tier	< $25

Biostatistics 226 Section: 1

Applied Longitudinal Analysis (190043)

Garrett Fitzmaurice

2017 Spring (5 Credits) **Schedule:** TR 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 165

This course covers modern methods for the analysis of repeated measures, correlated outcomes and longitudinal data, including the unbalanced and incomplete data sets characteristic of biomedical research. Topics include an introduction to the analysis of correlated data, analysis of response profiles, fitting parametric curves, covariance pattern models, random effects and growth curve models, and generalized linear models for longitudinal data, including generalized estimating equations (GEE) and generalized linear mixed effects models (GLMMs).

Course Activities: Homework assignments will focus on data analysis in SAS using PROC GLM, PROC MIXED, PROC GENMOD, and PROC GLIMMIX.

Course Note: Lab or section times will be announced at first meeting.
Course Prerequisite(s): BIO210 or BIO211 or BIO213 or BIO232.

Formerly BIO226

Requirements: **HSPH: BIO226**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 227 Section: 1

Introduction to Statistical Genetics (190044)

Martin Aryee

Sharon Lutz

2020 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 36

This course introduces students to the diverse statistical methods used throughout the process of statistical genetics. Topics covered include the basic molecular biology underpinnings of genetics, principles from population genetics, family-based and population-based association testing, genome wide association studies, expression QTL (eQTL) analysis and epigenome-wide association studies. Instructors use ongoing research to illustrate basic principles. Weekly homeworks supplement reading, course lectures, discussion and section. Relevant concepts in genetics and molecular genetics will be reviewed in lectures and labs. The emphasis of the course is fundamental principles and concepts.

Course Note: There will be a weekly lab section; the time will be scheduled at first meeting.

Formerly BIO227

Introduction to Statistical Genetics (190044)

Martin Aryee

2017 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course introduces students to the diverse statistical methods used throughout the process of statistical genetics, from familial aggregation and segregation studies to linkage scans and association studies. Topics covered include basic principles from population genetics, multipoint and model-free linkage analysis, family-based and population-based association testing, and Genome Wide Association analysis. Instructors use ongoing research into the genetics of respiratory disease, psychiatric disorders and cancer to illustrate basic principles. Weekly homeworks supplement reading, course lectures, discussion and section. Relevant concepts in genetics and molecular genetics will be reviewed in lectures and labs. The emphasis of the course is fundamental principles and concepts.

Course Prerequisites: BST210 (concurrent enrollment allowed) or PHS 2000A (concurrent enrollment allowed)

Course Note:There will be a weekly lab section; the time will be scheduled at first meeting.

Applied Bayesian Analysis (203515)

Briana Joy Stephenson

2020 Fall (5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 25

This course is a practical introduction to the Bayesian analysis of biomedical data. It is an intermediate Master's level course in the philosophy, analytic strategies, implementation, and interpretation of Bayesian data analysis. Specific topics that will be covered include: the Bayesian paradigm; Bayesian

analysis of basic models; Bayesian computing: Markov Chain Monte Carlo; STAN R software package for Bayesian data analysis; linear regression; hierarchical regression models; generalized linear models; meta-analysis; models for missing data.

Programming and case studies will be used throughout the course to provide hands-on training in these concepts.

Prerequisites: (BST210 or PHS 2000A&B) and BST222, or permission of the instructor

Requirements: **HSPH: BST228**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 3: Essential Course

Statistical Inference I (190048)

Robert Gray

2021 Spring (5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 15

A fundamental course in statistical inference. Discusses general principles of data reduction: exponential families, sufficiency, ancillarity and completeness. Describes general methods of point and interval parameter estimation and the small and large sample properties of estimators: method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, asymptotic relative efficiency of estimators. Describes general methods of hypothesis testing and optimality properties of tests: Neyman-Pearson theory, likelihood ratio tests, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency of tests.

Course Note: Lab or section time to be announced at first meeting; cross-listed: HSPH student must register for HSPH course.

Course Prerequisite(s): BST230 (concurrent enrollment allowed)

Instructor Permissions: None **Enrollment Cap:** 37

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Note: Students requesting a Pass/Fail option must do all homework and take all exams. Enrollment in the Department of Biostatistics, or signature of instructor required; lab or section times to be announced at first meeting; cross-listed: Harvard Chan School of Public Health students must register for Harvard Chan course.

Formerly BIO232

Requirements: **HSPH: BST232**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 232 Section: 1

Methods I (190049)

Brent Coull

2018 Fall (5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 40

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Note: Students requesting a Pass/Fail option must do all homework and take all exams. Enrollment in the Department of Biostatistics, or signature of instructor required; lab or section times to be announced at first meeting. Cross-listed: Harvard Chan School of Public Health students must register for Harvard

Chan course.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | PHD-BIO

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **HSPH: BST232**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO

Biostatistics 233 Section: 1

Methods II (190050)

Brent Coull

2018 Spring (5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 40

Intermediate course in the analysis of Gaussian, categorical, and survival data. The generalized linear model, Poisson regression, random effects and mixed models, comparing survival distributions, proportional hazards regression, splines and smoothing, the generalized additive model.

Course Note: Lab or section times to be announced at first meeting.

Course Prerequisites: BST232

Formerly BIO233

Requirements: **HSPH: BST233**

Advanced Regression and Statistical Learning (190052)

Junwei Lu

2020 Fall (5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimensional reduction, and classification methods. Background in matrix algebra and linear regression required.

Formerly BIO235

Requirements: **Pre-requisites: BST231 and (BST 232 or BST233).**

Additional Course Attributes:

Health Survey Samples (211186)

Marcello Pagano

2021 Spring (2.5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 25

To comprehend and monitor the public health, one needs to measure it. To this end, surveys are indispensable, as evidenced by the National Center for Health Statistics, within the CDC, and the surveys they carry out; the ACS, as carried out by the Census Bureau; and the powerful DHS and any number of ubiquitous health related surveys. This course is meant to expose the student to sample surveys: their theoretical underpinnings, how to design them, how to collect the data, how to analyze the data, how to judge and interpret the data, and how to make inference about the public health from the survey. It is targeted at graduate students in the biostatistics department, but qualified students from the School are welcome, as sample surveys form the basis for a large fraction of public health data.

Course Notes: Lab or section times announced at first meeting. This course requires an understanding of statistical inference and the value of a random sample. Plus a facility with programming in R, or Stata.

Requirements: **Pre-Requisite: BST 230 / BIOSTAT 230**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Category	Category 4: Elective

Biostatistics 239 Section: 1

Statistical Inference II (190066)

Rui Wang

2018 Spring (5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 20

Sequel to BIO 231. Considers several advanced topics in statistical inference. Topics include limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddlepoint approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, and nonparametric curve estimation.

Course Note: Cross-listed, HSPH must register for HSPH course.

Course Prerequisites: BST231 and BST240, or permission of instructor required.

Formerly BIO251

Requirements: **HSPH: BST251**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Analysis of Failure Time Data (190059)

L. Wei

2021 Spring (5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods. Material is drawn from recent literature.
Course is crosslisted with Biostatistics 244 (FAS)
Course Prerequisite(s): BST231 and (BST 232 or BST233) and BST240 (formerly BIO250)

Formerly BIO244

Requirements: **Pre-requisties: BST231 and (BST 232 or BST233) and BST240 (formerly BIO250).**

Analysis of Multivariate and Longitudinal Data (190060)

Tom Chen

2020 Fall (5 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 25

Presents classical and modern approaches to the analysis of multivariate observations, repeated measures, and longitudinal data. Topics include the multivariate normal distribution, Hotelling's T2, MANOVA, the multivariate linear model, random effects and growth curve models, generalized estimating equations, statistical analysis of multivariate categorical outcomes, and estimation with missing data. Discusses computational issues for both traditional and new methodologies.

Course Note: Cross-listed, HSPH student must register for HSPH course.

Advanced Statistical Genetics (190067)

Liming Liang

2018 Spring (2.5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 10

BST247 is a seminar style course with readings selected from the literature in areas of expertise of the participating faculty. Content may vary from year to year. The specific objectives are (1) To train students to critically read foundational papers and current journal articles in Statistical Genetics, (2) To train students to present sophisticated ideas to an audience of peers, and (3) To prepare students to engage in doctoral level research in the area. After the course, students are expected to have an in-depth and broad understanding on important topics of statistical genetics research.
Course Prerequisite(s): BST227 and (BST231 or EPI511). BST231 may be taken concurrently.

Formerly BIO257

Requirements: **HSPH: BST247**

Special Topics in Biostatistics (2.5 cr) (203471)

Andrea Rotnitzky

2016 Fall (2.5 Credits) **Schedule:** TR 0130 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 32

Special Topics in Biostatistics, 2.5 credits

Topic: **Theory & Methods for Causality**

Class Notes: **Section 1: Theory & Methods for Causality (formerly BIO518)**

In this course students will learn about the available state of the art methods for drawing causal conclusions from experimental and observational studies and establish their theoretical properties. The course is intended for students who not only wish to apply the available tools but who also wish to learn the technical tools that will empower them to derive new methodology in causal inference. In particular, students will learn to: (1) formulate graphical models and counterfactual models to represent a-priori subject-matter knowledge and assumptions, and to define the causal contrasts of interest; (2) establish conditions under which causal contrasts are estimable; (3) analyze causal diagrams to identify the settings where conventional statistical analysis is flawed; (4) derive the statistical properties of analytic methods for causality based on estimation of the g-computation formula, inverse probability weighted and double-robust estimation of the parameters of marginal structural models and g-estimation of the parameters of structural nested models.

Course Prerequisite(s) BST230 and BST231

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 254 Section: 2

Special Topics in Biostatistics (2.5 cr) (203471)

Biostatistics 254 Section: 2

Special Topics in Biostatistics (2.5 cr) (203471)

Cyrus Mehta

2016 Fall (2.5 Credits) **Schedule:** TR 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 28

Special Topics in Biostatistics, 2.5 credits

Topic: **Dsgn & Mntor of Adpt Clin Tr**

Class Notes: **Section 2: Design and Monitoring of Adaptive Clinical Trials (formerly BIO276)**

This course is designed for students who are interested in understanding the motivation, statistical methods and operational challenges associated with the design and implementation of adaptive clinical trials. Adaptive designs permit data dependent changes to an on-going clinical trial that can improve the probability of success without undermining the statistical validity of the final analysis. While the emphasis will be on statistical methodology we will also include regulatory and data monitoring considerations, case studies, important publications, and hands-on experience with the East software as part of the classroom discussion or homework exercises. By the end of the course the students will gain an understanding of the advantages and limitations of adaptive designs, be able to design such trials themselves, be proficient with the East software, and be exposed to some actual case studies. The course will be especially valuable to Ph. D. students who are considering a career in the biopharmaceutical industry.

Course Prerequisite(s): BST222 or BST230 or signature of instructor required

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 254 Section: 3

Special Topics in Biostatistics (2.5 cr) (203471)

Donna Spiegelman

Molin Wang

2016 Fall (2.5 Credits) **Schedule:** T 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 25

Special Topics in Biostatistics, 2.5 credits

Topic: **Measurement Error and Misclass**

Class Notes: **Section 3: Measurement Error and Misclassification (formerly BIO515)**

This course will cover theory for valid estimation and inference in regression analysis when covariates are mis-classified or measured with error. Methods for generalized linear models and for survival

analysis will be addressed. Topics include likelihood-based methods, regression calibration, SIMEX, instrumental variables and optimal study design.

Course Prerequisites: BST231 and BST223 required
Course is mutually exclusive with EPI515. You may not take both this course and EPI515.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 254 Section: 4

Special Topics in Biostatistics (2.5 cr) (203471)

Paige Williams

Erin Lake

2017 Fall (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Special Topics in Biostatistics, 2.5 credits

Topic: **Grant & Res Prp Wrt for BST**

Class Notes: **Section 4: Effective Grant and Research Proposal Writing for Biostatistical Research**

This course will be organized partly as a seminar and partly as a practicum, in order to allow students to conceptualize and design a biostatistical research project, to craft effective research and grant proposals, and to develop skills for providing constructive critiques of the research proposals of other students and colleagues. During each week, the first session will be given seminar style but may also include case discussions or guest lectures. The second session of each week will be devoted to meeting in smaller subgroups of 2-3 students to share, discuss, and provide feedbac on grant or research proposals. At the end of the course, each student should submit a completed research proposal in the format of an appropriate research grant.

Registration Note: Restricted to 3rd year and higher doctoral students in Biostatistics

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Conditionally Approved	Conditionally Approved Course
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 256 Section: 1

Theory and Methods for Causality I (204792)

Andrea Rotnitzky

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 25

Health policy and clinical decisions rely on the findings of clinical and epidemiological studies of the causal effects of interventions, treatments or exposures. This course will be the first of a sequence of two 2.5 credit courses in which students will learn the mathematical foundations of, state of the art, causal analytic methods that help squeeze as much evidence as these imperfect studies carry about the causal effects of interest.

A central theme of the two-course sequence will be that, in order to properly conduct a causal analysis one must start with a formal model that encodes the temporal ordering of variables and possible a-priori known causal relationships. One must subsequently give a clear mathematical formulation of the effect measure that is of interest to answer the causal question at stake. The causal analysis is then geared towards inference about the specific effect measure. Students will understand why a formal theory of causation is needed and why intuition alone often leads to logical mistakes.

This two 2.5 credit-course sequence will focus on the theoretical underpinnings of the modern methods for causal inference. The course sequence will cover causal inference methods with enough mathematical rigor to address the needs of students in the Doctoral program in Biostatistics who not only wish to learn how to apply the methods but also to master the theoretical underpinnings which will enable them to develop new methods in causality.

The central theme of Theory and Methods for Causality I will be the formulation, interpretation and identification of models for causal inference.

By the end of the term, the students will have learned:

a) To formulate models based on counterfactuals/structural equations and models based oncausal diagrams to represent a-priori subject matter knowledge and assumptions. To understand the connections between counterfactual and graphical models. To apply these models to give rigorous mathematical definitions of common epidemiological concepts suchas confounding, selection bias, direct and indirect effect, static and dynamic treatment regimes. To analyze causal diagrams to identify settings in which conventional statistical regression analysis is inadequate.

b) To derive and prove sound and complete graphical rules to determine when is a causal effect of interest identified, i.e. when one can hope to consistently estimate the causal effect with the data at hand.

c) To understand the difficulties for conducting inference. In particular, the so called null-paradigm and the difficulties with parametric estimation of causal effects of time dependent treatments. The curse of dimensionality associated with conducting inference of causal effects and analytic strategies for addressing it.

Requirements: **HSPH: BST256**

Biostatistics 260 Section: 1

Introduction to Data Science (190068)

Heather Mattie

2020 Fall (5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 80

This class focuses on methods for learning from data, in order to gain useful predictions and insights.

Separating signal from noise presents many computational and inferential challenges, which we approach from a perspective at the interface of computer science and statistics. Through real-world examples of wide interest, we introduce methods for five key facets of an investigation:
1) data munging/scraping/sampling/cleaning in order to construct an informative, manageable data set;
2) software engineering skills for accessing data as well as organizing data analyses and making these analyses sharable and reproducible and
3) exploratory data analysis to generate hypotheses and intuition about the data;
4) inference and prediction based on statistical tools such as modeling,regression, and classification;
5) communication of results through visualization, stories, and interpretable summaries.

Formerly BIO260

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM60-HDS

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Data Science II (203514)

Heather Mattie

2021 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 40

This course is an introduction to deep learning, a branch of machine learning concerned with the construction, development, and application of neural networks. Deep learning algorithms extract layered high-level representations of data in a way that maximizes performance on a given task. We will cover a range of topics including basic neural networks, convolutional networks, and recurrent networks, and applications to problem domains like computer vision and speech recognition. Programming (Python) and case studies will be used throughout the course to provide hands-on training in these concepts.

Heather Mattie

2018 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 45

This course is the second course in the foundational sequence of the School's newly approved Master's Degree in Health Data Science. The course will build upon our existing course, BST260 "Introduction to Data Science", in presenting a set of tools for modeling and understanding complex datasets. Specifically, the course will provide practical regression and tree-based techniques for big data. Specific topics that will be covered include: linear model selection and regularization: LASSO and regularization; principal component regression and partial least squares; tree-based methods: decision trees; bagging, random forests, and boosting; unsupervised learning: principal components analysis, cluster analysis.

Programming (Python and R) and case studies will be used throughout the course to provide hands-on

training in these concepts.

Prerequisites: BST260 or permission of instructor

Requirements: **HSPH: BST261**

Computing for Big Data (205329)

Christine Choirat

2020 Fall (2.5 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 60

Big data is everywhere, from Omics and Health Policy to Environmental Health. Every single aspect of the Health Sciences is being transformed. However, it is hard to navigate and critically assess tools and techniques in such a fast-moving big data panorama. In this course, we are going to give a critical presentation of theoretical approaches and software implementations of tools to collect, store and process

data at scale. The goal is not just to learn recipes to manipulate big data but learn how to reason in terms of big data, from software design and tool selection to implementation, optimization and maintenance.

Statistical Learning (205330)

Rachel Nethery

2021 Spring (5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 50

Statistical learning is a collection of flexible tools and techniques for using data to construct prediction algorithms and perform exploratory analysis. This course will introduce students to the theory and application of methods for supervised learning (classification and regression) and unsupervised learning (dimension reduction and clustering). Students will learn the mathematical foundations underlying the methods, as well as how and when to apply different methods. Topics will include the bias-variance tradeoff, cross-validation, linear regression, logistic regression, KNN, LDA/QDA, variable selection, penalized regression, generalized additive models, CART, random forests, gradient boosting, kernels, SVMs, PCA, and K-means. Homework will involve mathematical and programming exercises, and exams will contain conceptual and mathematical problems. Programming in R will be used throughout the course to provide hands-on training and practical examples.

Prerequisites: BST 260 or BST 210 or BST 232.

Applied Machine Learning (205330)

Jeffrey Miller

2018 Spring (5 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 70

Statistical machine learning is a collection of flexible tools and techniques for using data to construct prediction algorithms for decision problerns and exploratory analysis. The central theme of the course will

be to ground the material in practical real-world data examples, in order to motivate the concepts and illustrate why and how the methods work. Some mathematical foundations will be covered, but the primary emphasis of the course will be on learning how to implement and use the methods, while gaining an intuitive understanding of them. Programming (in R) and case studies will be used throughout the course to provide hands-on training.

Prerequisites: BST 260 or BST 210 or BST 232.

Requirements: **HSPH: BST 263**

Biostatistics 267 Section: 1

Introduction to Social and Biological Networks (190132)

JP Onnela

2020 Fall (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 65

Many systems of scientific and societal interest consist of a large number of interacting components. The structure of these systems can be represented as networks where network nodes represent the components and network edges the interactions between the components. Network analysis can be used to study how pathogens, behaviors and information spread in social networks, having important implications for our understanding of epidemics and the planning of effective interventions. In a biological context, at a molecular level, network analysis can be applied to gene regulation networks, signal transduction networks, protein interaction networks, and more. This introductory course covers some basic network measures, models, and processes that unfold on networks. The covered material applies to a wide range of networks, but we will focus on social and biological networks. To analyze and model networks, we will learn the basics of the Python programming language and its NetworkX module.

The course contains a number of hands-on computer lab sessions. There are five homework assignments and four reading assignments that will be discussed in class. In addition, each student will complete a final project that applies network analysis techniques to study a public health problem.

Course Prerequisites: BST201 or ID201 or (BST202 & 203) or [BST206 & (BST207 or 208)]

Formerly BIO521

Requirements: **HSPH: BST267**

Reproducible Data Science (205561)

Heather Mattie

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 1200 PM
MTWRF 0900 AM - 1200 PM

Instructor Permissions: None **Enrollment Cap:** 20

The central theme of the course will be to meet these scientific needs of reproducible science through training in reproducible research. The topics covered in this course include the fundamentals of reproducible science, case studies in reproducible research, data provenance, statistical methods for reproducible science, and computational tools for reproducible science. This is a blended course where students are introduced to course content online through videos and reading assignments, and then discuss the content in lecture. Each student will submit a completely reproducible research project and give a short presentation at the end of the course.

Requirements: **HSPH: BST270**

Computing Environments for Biology (214542)

Curtis Huttenhower

2021 Spring (1.25 Credits) **Schedule:** TR 0100 PM - 0400 PM

Instructor Permissions: None **Enrollment Cap:** 25

This course provides a high-level introduction to general computing environments appropriate for biological data analysis, as preparation for more advanced computational biology and bioinformatics courses. It is intended for biologists, clinician-researchers, other bench or translational scientists, or mathematicians with little to no computational or applied quantitative experience. It provides a compressed, highly interactive, hands-on introduction to basic command line, Python, and R environments for biological data analysis and visualization. It covers basic quantitative methods that can be carried out for 'omics data analysis in these environments and ensures that students have access to local and online (i.e. grid, cloud) resources for using these tools in the future. Finally, it thoroughly introduces freely available documentation and strategies for self-learning when using computational methods for biology research.

Additional Course Attributes:

Introductory Genomics & Bioinformatics for Health Research (190097)

John Quackenbush

Camila Lopes-Ramos

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 50

This survey course is intended for a wide audience and will provide an introduction to genomics-inspired techniques and bioinformatics tools, including genome sequencing, DNA microarrays, proteomics, and publicly available databases and software tools.

Course Note: Lab or section times to be announced at first meeting.

Course Prerequisites: ID201 or [BST201 or (BST202 & 203) or (BST206 & (BST207 or 208)) and (EPI201 or EPI500)], or permission of instructor. Courses may be taken concurrently.

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 281 Section: 1

Genomic Data Manipulation (190119)

Curtis Huttenhower

Eric Franzosa

2017 Spring (5 Credits) **Schedule:** MW 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 40

Introduction to genomic data, computational methods for interpreting these data, and a survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.
This course is targeted at students in experimental biology programs with an interest in understanding how

available genomic techniques and resources can be applied in their research.

Lab or section time will be arranged at first meeting.

Formerly BIO508

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 282 Section: 1

Introduction to Computational Biology and Bioinformatics (190123)

Xiaole (Shirley) Liu

2021 Spring (5 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** 25

Basic biological problems, genomics technology platforms, algorithms and data analysis approaches in computational biology. There will be three major components of the course: microarray and RNA-seq analysis, transcription and epigenetic gene regulation, cancer genomics.

This course is targeted at both biostatistics and biological science graduate students with some statistics and computer programming background who have an interest in exploring genomic data analysis and algorithm development as a potential future direction.

Prerequisite: STAT 110 and CS5O, or students in BIO, CBQG, or HDS degree programs, or permission of instructor.

Formerly BIO512

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Cancer Genome Data Science (203516)

Giovanni Parmigiani

2020 Fall (5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 32

This course is an introduction to modern statistical computing techniques used to characterize and interpret cancer genome sequencing datasets. This Master's level course will begin with a basic introduction to DNA, genes, and genomes for students with no biology background. It will then introduce cancer as an evolutionary process and review landmarks in the history of cancer genetics, and discuss the basics of sequencing technology and modern Next Generation Sequencing. The course will cover the main steps involved in turning billions of short sequencing reads into a representation of the somatic genetic alterations characterizing an individual patient's cancer, and will build on this foundation to study topics related to identifying mutations under positive selection from multiple tumors sampled in a population.

By the end of the course, students will be able to apply state-of-the art analysis to cancer genome datasets and to critically evaluate papers employing cancer genome data.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Teaching Assistant (190102)

David Wypij

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 311 Section: 2

Teaching Assistant (190102)

David Wypij

2018 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
HSPH: Indpt. Study / Research	YES

Biostatistics 311 Section: 3

Teaching Assistant (190102)

David Wypij

2021 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	YES
Course Evaluation	Course Evaluation exempt

Biostatistics 311 Section: 3

Teaching Assistant (190102)

David Wypij

2020 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt
HSPH: Indpt. Study / Research	YES
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 311 Section: 3

Teaching Assistant (190102)

David Wypij

2020 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	YES
All: Cross Reg Availability	Available for Harvard Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 311 Section: 3

Teaching Assistant (190102)

David Wypij

2017 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Not Available for Cross Registration

Biostatistics 311 Section: 3

Teaching Assistant (190102)

David Wypij

2019 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Work with members of the department in laboratory instruction and the development of teaching materials.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
HSPH: Indpt. Study / Research	YES

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Xihong Lin

2020 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	YES

Course Evaluation	Course Evaluation exempt
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Xihong Lin

2017 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Xihong Lin

2019 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	YES
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Xihong Lin

2016 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 316 Section: 2

Quantitative Genomics Lab Rotation (190107)

Xihong Lin

2018 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Only available for students in the Interdisciplinary Research Training in Biostatistics and Computational Biology program

Complete lab rotation with members of the department in quantitative genomics.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
HSPH: Indpt. Study / Research	YES

Biostatistics 325 Section: 13

Master's Thesis and Collaborative Research Practicum (190108)

David Schoenfeld

2017 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **HSPH: BIO325**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 325 Section: 13

Master's Thesis and Collaborative Research Practicum (190108)

Rafael A. Irizarry

2018 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **HSPH: BIO325**

Master's Thesis and Collaborative Research Practicum (190108)

David Wypij

2017 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **HSPH: BIO325**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 325 Section: 2

Master's Thesis and Collaborative Research Practicum (190108)

David Wypij

Erin Lake

2019 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **Course Restriction: Restricted to students in the SM60-BIO Program**

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	YES

Biostatistics 325 Section: 2

Master's Thesis and Collaborative Research Practicum (190108)

Brent Coull

2019 Summer (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 1

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **Course Restriction: Restricted to students in the SM60-BIO Program**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Category	Category 2: Required Course
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 325 Section: 2

Master's Thesis and Collaborative Research Practicum (190108)

David Wypij

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **HSPH: BIO325**

Additional Course Attributes:

Biostatistics 325 Section: 3

Master's Thesis and Collaborative Research Practicum (190108)

David Wypij

2017 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **HSPH: BIO325**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 325 Section: 3

Master's Thesis and Collaborative Research Practicum (190108)

David Wypij

Erin Lake

2019 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **Course Restriction: Restricted to students in the SM60-BIO Program**

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	YES

Biostatistics 325 Section: 3

Master's Thesis and Collaborative Research Practicum (190108)

Brent Coull

2019 Summer (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 1

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **Course Restriction: Restricted to students in the SM60-BIO Program**

Biostatistics 325 Section: 7

Master's Thesis and Collaborative Research Practicum (190108)

Paul Catalano

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

Requirements: **HSPH: BIO325**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed

Biostatistics 325 Section: 7

Master's Thesis and Collaborative Research Practicum (190108)

Paul Catalano

2017 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Limited to students in the Biostatistics SM60 program, this ordinally graded thesis and practicum will include data analyses, data interpretation, and comparison of alternative methods, and will culminate in the student's written Master's thesis and oral presentation.

CBQG Collaborative Research Thesis (190143)

John Quackenbush

Peter Kraft

2021 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier

biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Requirements: **Course Restricted: Students in the CBQG SM2 program**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
HSPH: Indpt. Study / Research	YES

CBQG Collaborative Research Thesis (190143)

Rafael A. Irizarry

2017 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Requirements: **HSPH: CBQG325**

Additional Course Attributes:

Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Curtis Huttenhower

2019 Spring (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard

University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

CBQG Collaborative Research Thesis (190143)

JP Onnela

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

CBQG Collaborative Research Thesis (190143)

Giovanni Parmigiani

2018 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

CBQG Collaborative Research Thesis (190143)

Liming Liang

2018 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Requirements: **Course Restricted: Students in the CBQG SM2 program**

Winter Session – January 2021

This is a short, intensive, non-credit course on writing and publishing original research in peer-reviewed journals. We will deconstruct the narrative pathways and arguments embedded in the Introduction-Methods-Results-

Discussion (IMRAD) format; use revision and editing skills to transform rough drafts into manuscripts that are clear, concise, and compelling; and consider strategies for journal selection. Each session includes lecture, discussion, and peer review. Participants are strongly encouraged to have a full or partial draft manuscript to work on and share for peer review.

The course will meet from 10.00-1.00 for four straight days, January 19-22. Enrollment is limited, and attendance for all sessions is required, except with instructor's permission. To register, fill out this short survey. If you have questions, contact the instructor, Donald Halstead.

2018 Spring (0 Credits)

Schedule: TR 0945 AM - 1230 PM
TBD

Instructor Permissions: None

Enrollment Cap: 30

Winter Session – January 2018

This is an intensive, non-credit course on writing and publishing original public health research in peer-reviewed journals. Much of the material we cover will also apply to grant and research proposals, theses, dissertations and review articles, and pretty much everything thing you write.

We will closely examine the structures and conventions of scientific writing; study and apply the revision and editing skills needed to transform rough drafts into finished manuscripts that are clear, concise, compelling, and publishable; and consider strategies for journal selection and publishing. Each session includes lecture, discussion, and peer review. Participants should have either a full or partial draft manuscript to work on over the course and share for peer review.

The course will meet for 6 morning and afternoon sessions on Tuesdays and Thursdays, January 2–18, 2018. The morning sessions will meet from 9:45 am–12:30 pm. The afternoon sessions will meet from 2:00 pm–3:30 pm, for additional peer review.

Attendance at the afternoon sessions is not required, but is highly recommended: Reviewing others' work is one of the most important ways to learn how to improve your own writing.

To register, fill out this short application (https://harvard.az1.qualtrics.com/jfe/form/SV_29IM0K3qjrNrASF).

For more information, contact the instructor, Donald Halstead, dhalstea@hsph.harvard.edu .

Foundations for Public Health (216476)

Sue J. Goldie

2020 Fall (1 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

The purpose of this course is to provide an introduction to public health and establish a solid foundation for your education, experience and engagement over the next year. In the summer portion of the course, you will be introduced to the principles and science of public health, the major causes of morbidity and mortality, the social determinants of health, and the ways society can respond from the health sector and from outside the health sector. You will become familiar with commonly used metrics and measures that make up the "language of public health" and be exposed to conceptual frameworks that will help you to "ask the right questions". In the fall portion of the course, we will adopt a case-based approach to explore

some of the most important interdisciplinary health problems facing populations – locally and globally. Adopting an ecologic perspective, we will pay particular attention to transnational risks and global governance – preparing you to engage academically and professionally with the most consequential challenges of our times – from pandemic risk to climate change.

The course consists of six modules. You will complete the first four modules over the summer and the last two modules in the fall.

Foundation Modules. There are four core foundation modules (Module A, B, C and D), each of which contains an average of three lessons. Each lesson generally consists of a required reading and a few short videos with a brief "knowledge check" quiz at the end of most videos. There is an assessment exercise following each of the four modules. *These four modules will be completed in the summer* (July 20th – August 23).

Application Modules. There are two applied modules (Module E and F) through which you will be exposed to some of the most important interdisciplinary health problems facing populations. These modules will include a variety of asynchronous multimedia learning experiences, as well as case-based synchronous discussions intended to foster engagement with faculty and peers. *These two modules will be completed in the fall* (August 24 – October 23).

Class Notes: **Students will be automatically given access to the ID 100 Canvas Course Site during the week of July 20th. To earn credit and a grade, students are required to enroll in my.harvard during the Fall enrollment period.**

Principles of Biostatistics and Epidemiology (190736)

Instructor TBD

2015 Summer (7.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

This course provides an overview to topics in biostatistics and epidemiology that are important to a quantitative approach to solving public health problems and critically interpreting relevant literature. Topics include measures of frequency and association, design and validity of epidemiologic research designs, descriptive statistics and graphical methods, probability distributions, statistical inference, confounding and effect modification, linear and logistic regression, and screening. The course utilizes a blended teaching format, combining online and in-person activities, as well as group exercises and a semester-long group project. This course is restricted to students in the DrPH program.

Core Principles of Biostatistics and Epidemiology for Public Health Practice (190737)

Instructor TBD

2015 Fall (7.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 157

This course will provide an introduction to the methods of biostatistics and epidemiology in the context of public health and clinical research. The focus will be on applications, providing students with the skills necessary to critically interpret issues related to study design and data analysis in the public health literature. The computer is used throughout the course. Lectures are complemented by seminars and weekly lab sessions. Topics include measures of frequency and association, study designs, bias, confounding, screening tests, probability distributions, estimation and statistical inference, sample size estimation, and regression methods. Note: Lab session times will be announced at the first meeting.

Scientific Writing in Nutrition and Epidemiology (190742)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 6

This course is designed for nutrition/epidemiology doctoral degree students. Others may be admitted after discussion with the instructor. The course will cover organization of scientific papers, presentation of data in graphical and tabular forms, and style. The course is designed for advanced students who are beginning to work on a paper for publication. Each section of a paper will be discussed extensively. The goal is for each student to have a manuscript ready for submission to a peer review journal at the end of the course. Course Activities: Principles of scientific writing will be taught. Students will work on their papers independently, under the overall supervision of their own faculty advisors. Each student will critique the papers of classmates. The instructor will guide the discussion and use the paper to make additional points of constructive criticism, which will serve to illustrate the principles enunciated at the beginning of the class. Guidelines for journals and co-author criteria will be discussed. Approach to revisions based on reviewers' comments will be covered.

Course Location: Building 2 Room 375

Critical Thinking and Action for Public Health Professionals (203334)

Laurie Pascal

Howard Koh

Douglas Dockery

Meredith Rosenthal

David Williams

2016 Summer (5 Credits) **Schedule:** MTWRF 1230 PM - 0420 PM

Instructor Permissions: None **Enrollment Cap:** 60

Successful public health practitioners need the knowledge, skills, and leadership traits to address challenging public health issues in an increasingly complex and interconnected world. Whether in government, non-profits, hospitals and health systems, or other organizations, public health professionals are called upon to think analytically and creatively, engage and communicate effectively with multiple constituencies, develop sustainable strategies, and lead teams to implement workable solutions.

This interdisciplinary course is an introduction to the field of public health, incorporating ways of thinking and approaches from environmental health, social and behavioral science, life science, health policy and management, global health, ethics, communication and many other critical disciplines. The objective is to enable students to gain fundamental, crosscutting public health content knowledge and skills in order to begin approaching and solving public health problems in a thoughtful, systematic and comprehensive manner, i.e. to think and act like public health professionals.

Using an active learning approach, students are engaged through case studies, debates, team projects and real world experiences to expand their capabilities in effective, ethical decision making while immersed in complex situations. Fields of study are investigated through the lens of current, and very real, public health issues taught by experts in those areas.

This course is required fo all MPH students and is open to MPH students only. Students may not audit this course. Cohorts will be capped at 60 students. Each cohort will be composed of students from a variety of fields of study.

Requirements: **HSPH: ID216**

Nutrition and Global Health (190752)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

The course will cover the nutrition problems of less-developed countries. We will review the epidemiological, biological and behavioral consequences of malnutrition, with emphasis on infectious disease and perinatal outcomes. Many of the readings will address the latest on the efficacy of various nutrition interventions, as this knowledge is a pre-requisite to planning sound programs. Practical aspects related to programs, including nutrition assessment, types of study design, and other aspects of monitoring and evaluation will also be presented and discussed in class.

At the end of the course students will be able to:

• Assess the nutritional status of specific populations based on anthropometric, biochemical, and clinical measurements.

• Critically review the literature on the role of a nutritional factor and health outcomes, and identify strengths and weaknesses of each study.

• Discuss the latest findings from epidemiology studies on teh role of nutrition in the prevention, care, and treatment related to key infectious and perinatal health outcomes.

• Integrate nutritional research findings into field programs and consider practical issues related to program design and implementation.

Nutrition and Global Health (190752)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

The course will cover the nutrition problems of less-developed countries. We will review the epidemiological, biological and behavioral consequences of malnutrition, with emphasis on infectious disease and perinatal outcomes. Many of the readings will address the latest on the efficacy of various nutrition interventions, as this knowledge is a pre-requisite to planning sound programs. Practical aspects related to programs, including nutrition assessment, types of study design, and other aspects of monitoring and evaluation will also be presented and discussed in class.

At the end of the course students will be able to:

• Assess the nutritional status of specific populations based on anthropometric, biochemical, and clinical measurements.

• Critically review the literature on the role of a nutritional factor and health outcomes, and identify strengths and weaknesses of each study.

• Discuss the latest findings from epidemiology studies on teh role of nutrition in the prevention, care, and treatment related to key infectious and perinatal health outcomes.

• Integrate nutritional research findings into field programs and consider practical issues related to program design and implementation.

Nutritional Epidemiology II (190754)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

This course addresses methodological aspects of research in nutritional epidemiology. Topics include validation studies, adjustment for energy intake, and correction of measurement error. Theoretical as well as practical aspects will be covered. This course is intended primarily for students interested in doing epidemiologic research.

Course Activities: Review of original articles, data analyses, computersimulations.

Course Prerequisites: BIO210 and ID214 required. BIO210 may be taken concurrently.

Social Epidemiology (190762)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course is based on the new and completely revised edition of Social Epidemiology" by Berkman, Kawachi and Glymour. The aim of the course is to build on basic concepts in social epidemiology and epidemiology and social sciences more broadly to examine in a critical and insightful way the evidence and methods for understanding the social determinants of health. The course is oriented towards those students who have a solid foundation in basic methods so that we can move to more analytical discussions of evidence and novel approaches to identification of the ways in which the social environment influences health. Each class will build on selected readings and a chapter from "Social Epidemiology". We will cover social exposures related to socioeconomic status, inequality, discrimination, social networks, social capital, work organization and labor markets, social and economic policies, health behaviors and affective states. The course also integrates an understanding of experimental and policy interventions and biological pathways across the substantive domains.
Course Prerequisite(s): EPI201 and EPI202 and (SBS201 or SBS506). EPI202 may be taken concurrently.

Advanced Regression for Environmental Epidemiology (190782)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

This course covers applied advanced regression analysis. Its focus is on relaxing classical assumptions in regression analysis to better match what epidemiological data really looks like. Specifically, the course will cover nonlinear exposure-response relationships and repeated measure designs, including non-parametric and semi-parametric smoothing techniques, generalized additive models, qu and time series models. In addition to the theoretical material, students will apply these techniques using R to actual datasets including modeling the effects of environmental exposures on health outcomes. These techniques also are widely applicable to problems in infectious disease, psychiatric, nutritional, occupational, and cancer

epidemiology.

Course Activities: Lectures and structured workshops in the instructional computer facility.

Course Note: Basic biostatistics and a course in regression analysis recommended.

Additional Course Attributes:

MPH Practicum for QM Summer (190803)

Instructor TBD

2015 Summer (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Summer-Only QM Master of Public Health students develop an off-site practicum at their home institution under the supervision of a local mentor and a member of the faculty at HSPH. This practicum may include aspects of epidemiology, biostatistics, decision sciences, or other quantitative aspects of public health. Students should apply the competencies learned in core courses to an actual investigation. Following the second (QM) summer course work, students must submit a written proposal for the practicum along with a letter of support from an investigator from the student's home site, indicating an agreement to act as the local mentor for the project. This proposal is reviewed and an HSPH faculty supervisor is identified. Students ordinarily would write a paper suitable for publication, a grant proposal or a technical report. This exercise will culminate with a presentation in the final summer of the student's program.

Course Note: Students must attend the sessions of this course during the second and third summer and they are encouraged to attend their first summer. Regular contact between students and mentors and among students is expected via e-mail during the year to seek advice, provide activity updates and to discuss approaches to the solution of methodological issues.

Epidemiologic Methods for Global Health (203320)

Marcello Pagano

2016 Summer (2.5 Credits) **Schedule:** MTWRF 0830 AM - 1020 AM

Instructor Permissions: None **Enrollment Cap:** 55

The course will cover introductory level epidemiology and related biostatistical principles and methods, with a specific focus on problems related to global health. Students who take this course will fulfill the introductory level course requirements in epidemiology at HSPH; it will not fulfill a course requirement for biostatistics. Instruction will also be offered in using the statistical software package Stata for calculating

descriptive statistics, generating epidemiologic measures of association, and analyzing data at a basic level for monitoring and evaluation of global health programs. A key difference in this course compared with other introductory level courses in epidemiology is that it offers examples from global health to illustrate epidemiologic methods and statistical approaches.

In addition, the development of a project proposal that runs parallel to the basic foundation of epidemiology and biostatistics will be conducted to allow for immediate practical application of the concepts learned. At the conclusion of the course, students will have learned how to apply basic epidemiologic methods to evaluate global health programs and to critically analyze literature focused on global health problems for the purpose of advancing program design and service provision that is evidence-based. Although there are no formal prerequisites, this course is indended for students with some prior experience in international or global health.

Social Entrepreneurship in Health and the Environment (190811)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 24

This course introduces students to the concept of social entrepreneurship, which entails developing and implementing innovative, effective, scalable and financially viable social products or services. Students will gain practice in thinking about public health problems in a solution oriented manner, and learning how to channel those ideas into a well-planned business case for an intervention (whether in the form of a project or organization). Examples of social entrepreneurship initiatives will be provided through weekly readings and guest speakers, and students will be required to read and discuss these in class.

Obesity Epidemiology (190821)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 48

This course reviews current evidence on the burden, causes, consequences, and prevention of obesity from an epidemiological perspective. The course also reviews common epidemiologic methods to conduct obesity research and provides students with skills to critically analyze studies in obesity epidemiology. The policy and public health implications of recent findings in obesity research are discussed through case-studies.

Course Prerequisites: ID538 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207 or BIO206&208 or BIO206&209) and (EPI500 or EPI201 or EPI208 or EPI505)] (ID538 may be taken concurrently)

Built Environment, Human Energy Expenditure, and Public Health (190823)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

At the completion of this course, students will have an understanding of different built environments and human energy expenditure in those environments. As two examples, parks provide mental and social benefits but many park users have low human energy expenditure (sports spectators, slow walkers, park bench sitters, etc.). In contrast to parks, bicyclists in bicycle environments have higher energy expenditure. During this course, measures such as Health Impact Assessments (HIA) and policies such as Complete Streets will be studied to assess whether high human energy expenditure was considered. Through the students?? understanding of the built environment and human energy expenditure measures such as METs, students will understand the ways of translating information on obesity, physical activity, and health into practice effectively. The course is intended for undergraduate students, graduate students, and individuals interested in the design of the built environment. Those enrolled may be interested in environmental health, landscape architecture, park design, exercise physiology, public health, urban planning, government, engineering, METs, human energy expenditure measures, HIA, and walking and bicycling in all populations. The focus will be on creating urban forms with high human energy expenditure to lessen obesity, diabetes, stroke, Alzheimer??s disease, and cancer. This course is intended to fully address health and obesity reduction through the built environment in more ways than only recommending

that individuals engage in physical activity.

Course Activities: Discussion, lectures, guest lectures, writing 3 three page double-spaced papers that culminate in one final paper that is a collection of the 3 papers, a design charrette, and delivering short presentations. Materials include readings, websites, webcams, and video clips.

Methods for Mediation and Interaction (190826)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

The course will approach concepts and methods for mediation and interaction from the perspective of the counterfactual framework. The first part of the course will be concerned with mediation analysis, that is assessing the extent to which the effect of an exposure on some outcome is mediated through a particular intermediate and the extent to which it is direct or through other pathways. Definitions, theoretical identification results and statistical techniques related to mediation analysis will be covered. The material in this part of the course will clarify the assumptions required for the estimation of direct and indirect effect and will extend the approach to mediation typically employed in epidemiology and the social sciences to settings with interactions, non-linearities and time-varying exposures. The second part of the course will cover concepts and methods for interaction. Conceptual issues concerning interaction, effect modification and the relation and non-correspondence of statistical and mechanistic notions of interaction will be discussed. Empirical tests for biologic synergism and genetic epistasis will be discussed along with practical methods to implement such tests. Attention will be given to power and sample size calculations for interaction analyses and to assessing interaction in a variety of study designs including cohort, case-control, case-only, family-based and GWAS designs. If time permits, the course will conclude by offering an introduction to casual inference methods for addressing problems of social interaction, interference and spillover effects which arise in settings in which the exposure of one individual may affect the outcomes of other individuals. Prerequisites can be waived at the instructor's discretion.
Course Prerequisite(s): EPI289 or EPI207 or BIO291

Innovation and Global Health Systems (190829)

Instructor TBD

2015 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course examines innovation from a systems perspective. Aimed at high level practitioners interested in leadership roles in the public, private, nonprofit and multi/bi-lateral arenas, the course will take the form of a structured discussion-based seminar. Objectives are to gain foundational knowledge on health systems thinking and innovation through cross-cutting themes, case studies and enabling ecosystems. Throughout, high-level leaders will join the course, providing an opportunity for students to gain a deep understanding of respective areas of expertise. Because of the importance of exposing future practitioners and leaders to current innovators in the field of health systems, approximately 40% of the sessions for this course will be facilitated by outside faculty and speakers.

NOTE: Mondays: (Transportation pickup: FXB Center, HSPH @ 3:30PM)

The United States and China (217794)

William Kirby

2021 Spring (4 Credits) **Schedule:** R 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 50

The United States and China are global economic and military powers. They have a rich history of commerce, friendship, alliance, and antagonism. Both countries have been shaped and re-shaped by the nature of their mutual relations. Their relationship is in crisis, the outcome of which will do much to define the world of the 21st century.

This University-wide course invites undergraduates and graduate students to examine together the present and future of U.S.-China relations in the light of their past. What are the enduring patterns and issues in China's relations with the United States? How have these two countries perceived each other over time? How has trade defined the relationship from the Opium War to Huawei? How has war shaped experiences in

the United States and China, and what are the risks of military confrontation today? What are the prospects for cooperation on global crises such as climate change? What is the role of American and Chinese universities, such as Harvard and Tsinghua, in shaping mutual relations in a time of global pandemic?

The course emphasizes active, participant-centered discussions of major issues, texts, and contemporary events, and will engage with Harvard Business School cases, experts on the U.S.-China relationship, and the rich resources of Harvard's schools and the Harvard Center Shanghai. In their final project, students, working in groups, will address a central challenge in the Chinese-American relationship and propose a solution.

Class Notes: **This is a University course. All students should enroll in the Faculty of Arts and Sciences version of the course, GENED 1068.**

Graduate students must submit a petition to enroll through my.harvard by 11:59 p.m. Tuesday, January 19. If approved, your seat will be held until your school's registration deadline.

CBQG Collaborative Research Thesis (190143)

John Quackenbush

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Requirements: **HSPH: CBQG325**

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee

consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

2016 Fall (0.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides students with valuable real-world experience doing research in Boston's premier biomedical institutions. Students are mentored by a member of the program faculty or other affiliated quantitative scientist working in clinical and epidemiological research projects at HSPH, Harvard University, or Harvard-affiliated hospitals.

The Collaborative Research Thesis will normally be undertaken during the fourth (spring) semester, after coursework has been completed. It will be presented in both oral and written form before a committee consisting of the thesis advisor and two additional program faculty. Students with a more extensive background may be permitted to undertake their thesis research during the summer following their second semester, and complete the entire program in as little as 16 months.

Students in the program must complete a 10-20 credit thesis, and so could register for this course possibly 2 to 4 times to achieve the total number of credits. Only students in this program are eligible to register for this course.

Paradigms of Social Theory (190439)

Instructor TBD

2016 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 27

This course is designed as a required core seminar for DrPH students on socialtheory, complementing required coursework in economic theory and analysis. It presents a range of social scientific frameworks and lenses through which public health issues are filtered. It has two primary preoccupations. Firstly, the question of agency within the social world, a problem that is central to all social sciences and to the distinctions between them. Secondly, the relationship between power and knowledge, a problem of all sciences, and of public health, for which a critical social scientific perspective is often crucial. In this course, you will learn to distinguish and apply a variety of frameworks and methods from anthropology, sociology, and psychology. This will be done in three sections. The first introduces and contextualizes social science and its variants through exposure to the primary texts of foundational theorists. In the second section, the focus is on methods - methods of research, but also methods of writing and of thinking. The final section takes up a range of contemporary topics and read work from a variety of disciplines on this topic. The focus is on honing analytical skills to critique arguments in terms of each other.

Integrating Seminar 2 (190474)

Instructor TBD

2016 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 14

The course is a second semester of ?Ç£integrating seminar?Ç¥ designed for the DrPH. It is designed with two phases of learning in mind. In the first phase of the course, students are introduced to core concepts in the theory of knowledge and epistemology. Students are then engaged in the application of the theories to formulate significant and feasible questions. Students will also participate in exercises that apply analytic, synthesis, and translation competencies from previous coursework in the DrPH curriculum. These learning activities will support students?ÇÖ efforts to build questions, frameworks, and justifications for their DELTA Doctoral Project Proposal. In the second phase of the course, student will develop and refine their

analytic, writing, and communication skills setting the stage for the completion of their DELTA Doctoral Project Proposal and submission to their committee, their sponsoring organization, and potential funding sources. Teaching methods in this course will include lectures, class discussion, readings, group work, team presentations, and collaborative critique from instructors and peers.

Additional Info: This course designed for and required of all DrPH degree students in their second year in the program

Advanced Topics in Women, Gender and Health (191277)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

This interdepartmental, interdisciplinary seminar will offer the chance to analyze ways by which diverse constructs of gender influence public health research and practice. Using different examples each week, the core WGH faculty and students will focus on how gender contributes to classifying, surveying, understanding and intervening on population distributions of health, disease, and well-being. Discussion of these examples will draw on different disciplines, conceptual frameworks, and methodological approaches (both quantitative and qualitative). For example, traditional epidemiological and biostatistical methods, along with multilevel, ecosocial, and health and human rights frameworks will be applied, as appropriate, in the assessment of gender-based health related disorders. The format will include formal presentations and informal discussions.

Course Note: Minimum enrollment of 5; maximum enrollment of 20.
